Character functions Operate on character data Examples include CONCAT concatenates two strings into one LENGTH returns the length of a string and REPLACE replaces a character sequence in a string with a different set of characters

Date functions Operate on dates and supplement the DATE datatype Examples include SYSDATE returns the current date and time in the Oracle Server and LAST\_DAY returns the last day in the month of the specified date

Numeric functions Operate on numeric data Examples include CEIL returns the smallest integer greater than or equal to the specified

number and POWER returns a number raised to a particular power LOB functions Operate on large object data Examples include EMPTY\_BLOB returns an empty locator of the binary large object type and EMPTY\_CLOB returns an empty locator of the character large object type Conversion functions Perform explicit conversions of different types of data Examples include TO\_CHAR converts a number or date to a string and TO\_NUMBER converts a string to a number Miscellaneous functions Examples include GREATEST returns the greatest of the specified list of values and UID returns the user ID of the current Oracle session Built in packages collections of PL SQL objects such as functions procedures and data structures greatly expand the scope of the PL SQL language These packages are described in detail in Feuerstein s and Beresniewicz s book Oracle Built in Packages Built in packages are built by Oracle Corporation and stored directly in the Oracle database The functionality of the built ins is available from any programming environment that can call PL SQL stored procedures including Visual Basic Oracle Developer 2000 Oracle Application Server for Web based development and of course the Oracle database itself Built in packages extend the capabilities and power of PL SQL in many significant ways For example DBMS\_SQL executes dynamically constructed SQL statements and PL SQL blocks of code DBMS\_PIPE communicates between different Oracle sessions through a pipe in the RDBMS shared memory DBMS\_JOB submits and manages regularly scheduled jobs for execution inside the database DBMS\_LOB accesses and manipulates Oracle8 s large objects LOBs from within PL SQL programs The book shows how to call all of the commonly used built in functions and packages For packages it also shows the RESTRICT REFERENCES pragmas needed if you call packages from a SQL statement as well as the exceptions constants and data structures defined in the packages **Oracle Scripts** Brian Lomasky,David C.
