The Neurological Basis of Learning, Development and Discovery Anton E. Lawson, 2006-04-11 A goal of mine ever since becoming an educational researcher has been to help construct a sound theory to guide instructional practice For far too long educational practice has suffered because we have lacked firm instructional guidelines which in my view should be based on sound psychological theory which in turn should be based on sound neurological theory In other words teachers need to know how to teach and that how to teach should be based solidly on how people learn and how their brains function As you will see in this book my answer to the question of how people learn is that we all learn by spontaneously generating and testing ideas Idea generating involves analogies and testing requires comparing predicted consequences with actual consequences We learn this way because the brain is essentially an idea generating and testing machine But there is more to it than this The very process of generating and testing ideas results not only in the construction of ideas that work i e the learning of useful declarative knowledge but also in improved skill in learning i e the development of improved procedural knowledge

Handbook of Early Childhood Education Robert C. Pianta, Susan M. Sheridan, 2015-08-12 Comprehensive and authoritative this forward thinking book reviews the breadth of current knowledge about early education and identifies important priorities for practice and policy Robert C Pianta and his associates bring together foremost experts to examine what works in promoting all children s school readiness and social emotional development in preschool and the primary grades Exemplary programs instructional practices and professional development initiatives and the systems needed to put them into place are described The volume presents cutting edge findings on the family and social context of early education and explores ways to strengthen collaboration between professionals and parents

Higher Order Thinking in Science Classrooms: Students' Learning and Teachers' Professional Development Anat Zohar, 2004-01-31 How can educators bridge the gap between big ideas about teaching students to think and educational practice This book addresses this question by a unique combination of theory field experience and elaborate educational research Its basic idea is to look at science instruction with regard to two sets of explicit goals one set refers to teaching science concepts and the second set refers to teaching higher order thinking This book tells about how thinking can be taught not only in the rare and unique conditions that are so typical of affluent experimental educational projects but also in the less privileged but much more common conditions of educational practice that most schools have to endure It provides empirical evidence showing that students from all academic levels actually improve their thinking and their scientific knowledge following the thinking curricula and discusses specific means for teaching higher order thinking to students with low academic achievements The second part of the book addresses issues that pertain to teachers professional development and to their knowledge and beliefs regarding the teaching of higher order thinking This book is intended for a very large audience researchers including

graduate students curricular designers practicing and pre service teachers college students teacher educators and those interested in educational reform Although the book is primarily about the development of thinking in science classrooms most of its chapters may be of interest to educators from all disciplines

Inquiry-Based Learning for the Arts, Humanities and Social Sciences Patrick Blessinger, John M. Carfora, 2014-12-15 This volume is the second in the series covering the many issues and concepts of how inquiry based learning IBL can be applied to arts humanities and social sciences programs

Researching Design Learning Richard Kimbell, Kay Stables, 2007-09-23 Design and Technology evolved in the school curriculum from the mid 1960s By the 1980s it had become mainstream for the British government to fund research exploring what learners could do when challenged with design the teacher the environment the task the learners themselves Researching such questions their concerns have integrated the conceptual the practical and the pedagogic

Teaching Engineering Phillip C. Wankat, Frank S. Oreovicz, 2015 This book aims to cover all aspects of teaching engineering and other technical subjects It presents both practical matters and educational theories in a format that will be useful for both new and experienced teachers

Chemists' Guide to Effective Teaching Norbert J. Pienta, Melanie M. Cooper, Thomas J. Greenbowe, 2005 For courses in Methods of Teaching Chemistry Useful for new professors chemical educators or students learning to teach chemistry Intended for anyone who teaches chemistry or is learning to teach it this book examines applications of learning theories presenting actual techniques and practices that respected professors have used to implement and achieve their goals Each chapter is written by a chemist who has expertise in the area and who has experience in applying those ideas in their classrooms This book is a part of the Prentice Hall Series in Educational Innovation for Chemistry
