The Annotated Mona Lisa Carol Strickland, John Boswell, 2007-10 Like music art is a universal language Although looking at works of art is a pleasurable enough experience to appreciate them fully requires certain skills and knowledge Carol Strickland from the introduction to The Annotated Mona Lisa A Crash Course in Art History from Prehistoric to Post Modern This heavily illustrated crash course in art history is revised and updated This second edition of Carol Strickland s The Annotated Mona Lisa A Crash Course in Art History from Prehistoric to Post Modern offers an illustrated tutorial of prehistoric to post modern art from cave paintings to video art installations to digital and Internet media Featuring succinct page length essays instructive sidebars and more than 300 photographs The Annotated Mona Lisa A Crash Course in Art History from Prehistoric to Post Modern takes art history out of the realm of dreary textbooks demystifies jargon and theory and makes art accessible even at a cursory reading From Stonehenge to the Guggenheim and from Holbein to Warhol more than 25 000 years of art is distilled into five sections covering a little more than 200 pages

The One who Set Out to Study Fear Peter Redgrove, 1989 The author of The Wise Wound presents here a re telling of Grimm s famous fairy tales written in a manner and spirit more suited to the present day Each story is rooted in the original but cast in an energetic style that is both disrespectful and humorous

All We Have to Fear Allan V. Horwitz, PhD, Jerome C. Wakefield, 2012-06 Thirty years ago it was estimated that less than five percent of the population had an anxiety disorder Today some estimates are over fifty percent a tenfold increase Is this dramatic rise evidence of a real medical epidemic In All We Have to Fear Allan Horwitz and Jerome Wakefield argue that psychiatry itself has largely generated this epidemic by inflating many natural fears into psychiatric disorders leading to the over diagnosis of anxiety disorders and the over prescription of anxiety reducing drugs American psychiatry currently identifies disordered anxiety as irrational anxiety disproportionate to a real threat Horwitz and Wakefield argue to the contrary that it can be a perfectly normal part of our nature to fear things that are not at all dangerous from heights to negative judgments by others to scenes that remind us of past threats as in some forms of PTSD Indeed this book argues strongly against the tendency to call any distressing condition a mental disorder To counter this trend the authors provide an innovative and nuanced way to distinguish between anxiety conditions that are psychiatric disorders and likely require medical treatment and those that are not the latter including anxieties that seem irrational but are the natural products of evolution The authors show that many commonly diagnosed irrational fears such as a fear of snakes strangers or social evaluation have evolved over time in response to situations that posed serious risks to humans in the past but are no longer dangerous today Drawing on a wide range of disciplines including psychiatry evolutionary psychology sociology anthropology and history the book illuminates the nature of anxiety in America making a major contribution to our understanding of mental health

exploration of the science of emotion After years of neglect by both mainstream biology and psychology the study of emotions has emerged as a central topic of scientific inquiry in the vibrant new discipline of affective neuroscience Elizabeth Johnston and Leah Olson trace how work in this rapidly expanding field speaks to fundamental questions about the nature of emotion What is the function of emotions What is the role of the body in emotions What are feelings and how do they relate to emotions Why are emotions so difficult to control Is there an emotional brain The authors tackle these questions and more in this tasting menu of cutting edge emotion research They build their story around the path breaking 19th century works of biologist Charles Darwin and psychologist and philosopher William James James s 1884 article What Is an Emotion continues to guide contemporary debate about minds brains and emotions while Darwin s treatise on The Expression of Emotions in Animals and Humans squarely located the study of emotions as a critical concern in biology Throughout their study Johnston and Olson focus on the key scientists whose work has shaped the field zeroing in on the most brilliant threads in the emerging tapestry of affective neuroscience Beginning with early work on the brain substrates of emotion by such workers such as James Papez and Paul MacLean who helped define an emotional brain they then examine the role of emotion in higher brain functions such as cognition and decision making They then investigate the complex interrelations of emotion and pleasure introducing along the way the work of major researchers such as Antonio Damasio and Joseph LeDoux In doing so they braid diverse strands of inquiry into a lucid and concise introduction to this burgeoning field and begin to answer some of the most compelling questions in the field today How does the science of normal emotion inform our understanding of emotional disorders To what extent can we regulate our emotions When can we trust our emotions and when might they lead us astray How do emotions affect our memories and vice versa How can we best describe the relationship between emotion and cognition Johnston and Olson lay out the most salient questions of contemporary affective neuroscience in this study expertly situating them in their biological psychological and philosophical contexts They offer a compelling vision of an increasingly exciting and ambitious field for mental health professionals and the interested lay audience as well as for undergraduate and graduate students
