Sets Groups:

Introduction To Abstract Algebra, An: Sets, Groups, Rings, And Fields Steven Howard Weintraub, 2022-05-25 This book is a textbook for a semester long or year long introductory course in abstract algebra at the upper undergraduate or beginning graduate level It treats set theory group theory ring and ideal theory and field theory including Galois theory and culminates with a treatment of Dedekind rings including rings of algebraic integers In addition to treating standard topics it contains material not often dealt with in books at this level It provides a fresh perspective on the subjects it covers with in particular distinctive treatments of factorization theory in integral domains and of Galois theory As an introduction it presupposes no prior knowledge of abstract algebra but provides a well motivated clear and rigorous treatment of the subject illustrated by many examples Written with an eye toward number theory it contains numerous applications to number theory including proofs of Fermat's theorem on sums of two squares and of the Law of Quadratic Reciprocity and serves as an excellent basis for further study in algebra in general and number theory in particular Each of its chapters concludes with a variety of exercises ranging from the straightforward to the challenging in order to reinforce students knowledge of the subject Some of these are particular examples that illustrate the theory while others are general results that develop the theory further

Sets, Groups, and Mappings: An Introduction to Abstract Mathematics Andrew D. Hwang, 2019-09-26 This book introduces students to the world of advanced mathematics using algebraic structures as a unifying theme Having no prerequisites beyond precalculus and an interest in abstract reasoning the book is suitable for students of math education computer science or physics who are looking for an easy going entry into discrete mathematics induction and recursion groups and symmetry and plane geometry In its presentation the book takes special care to forge linguistic and conceptual links between formal precision and underlying intuition tending toward the concrete but continually aiming to extend students comfort with abstraction experimentation and non trivial computation The main part of the book can be used as the basis for a transition to proofs course that balances theory with examples logical care with intuitive plausibility and has sufficient informality to be accessible to students with disparate backgrounds For students and instructors who wish to go further the book also explores the Sylow theorems classification of finitely generated Abelian groups and discrete groups of Euclidean plane transformations

The Descriptive Set Theory of Polish Group Actions Howard Becker, A. S. Kechris, 1996-12-05 In this book the authors present their research into the foundations of the theory of Polish groups and the associated orbit equivalence relations The particular case of locally compact groups has long been studied in many areas of mathematics Non locally compact Polish groups occur naturally as groups of symmetries in such areas as logic especially model theory ergodic theory group representations and operator algebras Some of the topics covered here are topological realizations of Borel measurable actions universal actions applications to invariant measures actions of the infinite symmetric group in connection with model theory logic actions dichotomies for orbit spaces including Silver Glimm Effros type

dichotomies and the topological Vaught conjecture descriptive complexity of orbit equivalence relations definable cardinality of orbit spaces

Neutrosophic Triplet Group Based on Set Valued Neutrosophic Quadruple Numbers Memet Sahin, Abdullah Kargin, Smarandache introduced neutrosophic quadruple sets and neutrosophic quadruple numbers 45 in 2015 These sets and numbers are real or complex number valued In this study we firstly introduce set valued neutrosophic quadruple sets and numbers We give some known and special operations for set valued neutrosophic quadruple numbers
