### Setting Performance Standards: Concepts, Methods, and Perspectives

Edited by Gregory J. Cizek

Mahwah, NJ: Lawrence Erlbaum, 2001, 300pp.

ISBN 0-8058-3674-8

Most readers of *Applied Psychological Measurement (APM)* and its sib-publications in education research would have noticed an upsurge of interest during the past two decades or so in topics surrounding the determination of a passing or cut-score or, more broadly, of the practice of standard setting. The impressive work brought together in this volume explains why. At the core of standard setting is the simple question of how to separate in a defensible way one specifiable kind of object from another, given that these objects exhibit a relevant attribute to varying degrees. So broad is this need that it is no wonder that standard setting has been around for a long time, and it is seen in countless essential societal functions, serving a broad spectrum of credentialing purposes necessary to ensure safe products, competent critical and professional services, and equitable allocation of valued resources. But, as it is always the case, the devil is in the details.

For readers of *APM* who may be more familiar with the educational and psychological applications of standard setting, there is ample space devoted to the problems of setting performance standards in various assessment contexts. In current standards-based public education reform, after agreeing on a set of content standards, setting reasonable and defensible performance standards is the one other step that infuses practical or policy relevance for various ranges of performance on a test. In the process, an otherwise "routine" process of estimating a cut-score is made a lot more intriguing due to a mix of technical demands and policy pressures.

#### Organization and Contents

The volume is organized in three parts, reflecting a very sensible ordering of its goals. Part 1 lays out the essential arguments for the need to set standards in educational assessment, offering a synopsis of its progress over the past 50 years. The introductory chapter by the editor (Cizek, chapter 1) gives a very succinct statement of the fact that, because standard setting is so vital to so many essential societal processes, the pursuit of its science is necessary. Zieky (chapter 2) provides a review, as only a pioneer in the field can, detailing how in the past 20 years alone the field has changed dramatically as it has staved off challenges to its goals, methods, and procedures. Zieky's refrain, that the core problem for setting a performance standard has remained unchanged, is taken up and much expanded by Kane (chapter 3), who argues very effectively for the role of assembling a multitude of external empirical checks on the impact of any cut-score to detect gross flaws and unintended consequences in the standards that are set. Hambleton (chapter 4) illustrates with an
