Last of the Wild Robert M. McClung, 1997 Profiles threatened animals around the world and discusses why they are in danger and what is being done to save them

When the Last Lion Roars Sara Evans, 2018-06-14 The illegal killing of Cecil a famous and magnificent black maned Zimbabwean lion by an American big game hunter in 2015 sparked international outrage More significantly it drew the world's attention to the devastating plight of Africa's lions A century ago there were more than 200 000 wild lions living in Africa Today with that population reduced by more than 90 per cent many experts believe that without effective conservation plans Africa's remaining wild lions could be completely wiped out by the mid half of this century When the Last Lion Roars explores the historic rise and fall of the lion as a global species and examines the reasons behind its catastrophic decline Interwoven with vivid personal encounters of Africa's last lions Sara Evans questions what is being done to reverse or at least stem this population collapse and she considers the importance of human responsibility in this decline and more crucially in their conservation From the Lion Guardians in Kenya to the Living Walls of Tanzania and the Hwange Lion Research Project in Zimbabwe Sara meets both lions and their champions people who are fighting to bring this iconic species back from the brink of extinction

Quaternary Extinctions Paul S. Martin, Richard G. Klein, 2002-01-04 What caused the extinction of so many animals at or near the end of the Pleistocene Was it overkill by human hunters the result of a major climatic change or was it just a part of some massive evolutionary turnover Questions such as these have plagued scientists for over one hundred years and are still being heatedly debated today Quaternary Extinctions presents the latest and most comprehensive examination of these questions Geological Magazine May be regarded as a kind of standard encyclopedia for Pleistocene vertebrate paleontology for years to come American Scientist Should be read by paleobiologists biologists wildlife managers ecologists archeologists and anyone concerned about the ongoing extinction of plants and animals Science Uncommonly readable and varied for watchers of paleontology and the rise of humankind Scientific American Represents a quantum leap in our knowledge of Pleistocene and Holocene palaeobiology Many volumes on our bookshelves are destined to gather dust rather than attention But not this one Nature Two strong impressions prevail when first looking into this epic compendium One is the judicious balance of views that range over the whole continuum between monocausal cultural or environmental explanations The second is that both the data base and theoretical sophistication of the protagonists in the debate have improved by a quantum leap since 1967 American Anthropologist
