Introduction

Nowadays, multiple regression (MLR) is believed to be an efficient means of analysis of independent configurations. The article under consideration aims at finding the correlation between centralization, digitalization, and structuralization in terms of public procurement. Thus, the authors provide the results attached as a table. By use of MLR, they try to prove that digitalization serves as the most important component to optimize public procurement, whereas structuralization plays no sufficient role in it. As far as centralization is concerned, it has both positive and negative effects on the issue.

Discussion

Actually, it would be reasonable to dwell on the reason why the authors used multiple regression. First of all, centralization, digitalization, and structuralization as economic factors are unlikely to have any visible connection. According to the article, "knowledge about public procurement configuration is still incomplete; many studies investigate the topic with a distinct focus on the private sector" (as cited from Bals, et al., 2018), "but it is questionable if findings fully apply to public administration. A second research gap exists because existing literature on the topic often adopts a country-wide perspective" (as cited from Wang & Li, et al., 2014). Therefore, the regression equation and its statistical significance may be easily shown by the use of a chart.

Secondly, multiple regression is widely used; its principles can be learned and applied without particular knowledge of mathematics. However, some researchers claim that "to fit the entire moderated
