Joseph Levy

Lymphocytes A Practical Approach:

Lymphocytes G. G. B. Klaus, 1987 The understanding of the roles of various types of lymphoid cells in immune responses has accelerated markedly over the last decade This has been accompanied by the development of increasingly sophisticated methodology for studying the properties of lymphocytes and for analysing their interactions both with each other and with appropriate accessory cells This book aims to provide a ready source of information on a wide range of procedures suitable for both the novice and the experienced cellular immunologist for studying lymphocytes and accessory cells in vitro The book starts with methods for preparing these cells from various sources for separating functional subpopulations of lymphocytes and for phenotyping the cells in cell suspensions and on tissue sections Other chapters deal with long term culture of T cells and with immortalization of B cells by Epstein Barr virus In addition a variety of assay systems for measuring precursor frequencies lymphocyte proliferation antibody production and the activities of cytokines interleukins are described A final chapter deals with methods for biochemical characterization of cell surface glycoproteins *Lymphocytes*, 1999-12-16

Cellular immunology is a rapidly moving field in which recent advances have made significant contributions to our understanding of the immune response to infection and malignancy These in turn have given rise to new therapeutic opportunities in areas such as vaccines and immunotherapy Many investigators have been discouraged by the complicated protocols involved in cellular immunological studies as illustrated by the meticulous care required for the generation of antigen specific T cells *Lymphocytes A Practical Approach* second edition contains straight forward protocols for well established procedures in the study of lymphocytes including preparation and identification of lymphocytes immortalization cell and organ culture and quantification assays It also covers the recent technological advances which have revolutionised the field such as the use of the Interferon gamma ELISpot assay and peptide HLA tetrameric assays to quantify antigen specific T cells directly from peripheral blood without the need for in vitro culture and molecular methods for accurate HLA typing

changes in the expression of accessory molecules
