Machine Learning Proceedings 1993 Lawrence A. Birnbaum, 2014-05-23 Machine Learning Proceedings 1993

Machine Learning Proceedings 1993 Lawrence Birnbaum, 2014 Machine Learning Proceedings 1993 **Machine Learning**, 1993 **Ray Shooting, Depth Orders and Hidden Surface Removal** Mark de Berg, 1993-08-30 Computational geometry is the part of theoretical computer science that concerns itself with geometrical objects it aims to define efficient algorithms for problems involving points lines polygons and so on The field has gained popularity very rapidly during the last decade This is partly due to the many application areas of computational geometry and partly due to the beauty of the field itself This monograph focuses on three problems that arise in three dimensional computational geometry The first problem is the ray shooting problem preprocess a set of polyhedra into a data structure such that the first polyhedron that is hit by a query ray can be determined quickly The second problem is that of computing depth orders we want to sort a set of polyhedra such that if one polyhedron is partially obscured by another polyhedron then it comes first in the order The third problem is the hidden surface removal problem given a set of polyhedra and a view point compute which parts of the polyhedra are visible from the view point These three problems involve issues that are fundamental to three dimensional computational geometry The book also contains a large introductory part discussing the techniques used to tackle the problems This part should interest not only those who need the background for the rest of the book but also anyone who wants to know more about some recent techniques in computational geometry Functional Programming, Concurrency, Simulation and Automated Reasoning Peter E. Lauer, 1993-06-16 This collection of papers arose from a series of lectures for workers in computer science and other disciplines The lectures were intended to familiarize them with some of the most exciting advanced computer based systems for the conceptualization design implementation simulation and logical analysis of applications in these disciplines The collection presents some strong motivational points for the use of theory based systems in the areas of functional programming concurrency simulation and automated reasoning highlighting some of their advantages and disadvantages relative to conventional systems The papers are mostly the work of individuals who were among the originators of the systems presented The volume is intended as a contribution to narrowing the learning gap facing conventional computer users when they wish to use advanced theory based systems The papers are meant for a wide audience and should not require great mathematical sophistication for their comprehension The papers contain numerous references for those wishing to pursue a topic in greater depth LOGIDATA+: Deductive Databases with Complex Objects Paolo Atzeni, 1993-07-29 This book presents a collection of coordinated scientific papers describing the work conducted and the results achieved within the LOGIDATA project a research action funded by the Italian national research council CNR The aim of the LOGIDATA project is the definition of advanced database systems which significantly extend the functionalities of the current systems with specific reference to the application areas for which relational systems are not considered

satisfactory These new systems will allow the definition of data with complex structures the representation of semantic relationships between objects and the use of powerful query and update languages They will be based on a combination of techniques originating from relational databases and logic programming with contributions from object oriented programming The goal of the LOGIDATA project is the design definition and prototype implementation of a database management system with complex structures and a class hierarchy to be accessed through a rule based language This book presents an integrated view of the project at the end of the first phase The second phase will be mainly concerned with the implementation of prototypes

**Parallel Computer Architectures** Arndt Bode, Mario Dal Cin, 2013-12-11 Parallel computer architectures are now going to real applications This fact is demonstrated by the large number of application areas covered in this book see section on applications of parallel computer architectures The applications range from image analysis to quantum mechanics and data bases Still the use of parallel architectures poses serious problems and requires the development of new techniques and tools This book is a collection of best papers presented at the first workshop on two major research activities at the Universitiit Erlangen Niirnberg and Technis che Universitiit Miinchen At both universities more than 100 researchers are working in the field of multiprocessor systems and network configurations and methods and tools for parallel systems Indeed the German Science Founda tion Deutsche Forschungsgemeinschaft has been sponsoring the projects under grant numbers SFB 182 and SFB 342 Research grants in the form of a Sonder forschungsbereich are given to selected German Universities in portions of three years following a thoroughful reviewing process The overall duration of such a research grant is restricted to 12 years The initiative at Erlangen Niirnberg was started in 1987 and has been headed since this time by Prof Dr H Wedekind Work at TU Miinchen began in 1990 head of this initiative is Prof Dr A Bode The authors of this book are grateful to the Deutsche Forschungsgemeinschaft for its continuing support in the field of research on parallel processing The first section of the book is devoted to hardware aspects of parallel systems

,1993    The Logic of Information Structures Heinrich Wansing,1993-07-29 This monograph gives a logical treatment of two central aspects of the concept of information namely information processing and information structure The structure of information is treated as a topic in model theory while information processing is seen as an aspect of proof theory A wide spectrum of substructural subsystems of intuitionistic propositional logic and of Nelson s constructive logic with strong negation is investigated In particular the problems of cut elimination functional completeness and coding of proofs with lambda terms are handled Finally an interpretation of these systems in terms of states of information and operations over these states is presented    *AI'93* Paul Beckett,1993    **"Ramayana.
