Massively Parallel Artificial Intelligence:

Massively Parallel Artificial Intelligence Hiroaki Kitano, James A. Hendler, 1994 The increased sophistication and availability of massively parallel supercomputers has had two major impacts on research in artificial intelligence both of which are addressed in this collection of exciting new AI theories and experiments Massively parallel computers have been used to push forward research in traditional AI topics such as vision search and speech More important these machines allow AI to expand in exciting new ways by taking advantage of research in neuroscience and developing new models and paradigms among them associate memory neural networks genetic algorithms artificial life society of mind models and subsumption architectures A number of chapters show that massively parallel computing enables AI researchers to handle significantly larger amounts of data in real time which changes the way that AI systems can be built which in turn makes memory based reasoning and neural network based vision systems become practical Other chapters present the contrasting view that massively parallel computing provides a platform to model and build intelligent systems by simulating the massively parallel processes that occur in nature

Massively Parallel Models of Computation Valmir C. Barbosa, 1993 This text explores the simulation by distributed parallel computers of massively parallel models of interest in artificial intelligence A series of models are surveyed including cellular automata Hopfield neural networks Bayesian networks Markov random fields and Boltzmann machines

Brain-Like and Massively-Parallel Computers Branko Soucek, Marina Souček, 1988-06-23 This book is designed to serve as a textbook reference in psychological intelligent neural knowledge engineering and its related technologies

Parallel Processing for Artificial Intelligence 3 J. Geller, H. Kitano, C.B. Suttner, 1997-02-10 The third in an informal series of books about parallel processing for Artificial Intelligence this volume is based on the assumption that the computational demands of many AI tasks can be better served by parallel architectures than by the currently popular workstations However no assumption is made about the kind of parallelism to be used Transputers Connection Machines farms of workstations Cellular Neural Networks Crays and other hardware paradigms of parallelism are used by the authors of this collection The papers arise from the areas of parallel knowledge representation neural modeling parallel non monotonic reasoning search and partitioning constraint satisfaction theorem proving parallel decision trees parallel programming languages and low level computer vision The final paper is an experience report about applications of massive parallelism which can be said to capture the spirit of a whole period of computing history This volume provides the reader with a snapshot of the state of the art in Parallel Processing for Artificial Intelligence

A Massively Parallel Architecture for Associative-based Artificial Intelligence James D. Roberts, 1995

Artificial Intelligence Methods and Applications Nikolaos G. Bourbakis, 1992 This volume is the first in a series which deals with the challenge of AI issues gives updates of AI methods and applications and promotes high quality new ideas techniques and methodologies in AI This volume contains articles by 38 specialists in various AI subfields covering theoretical and application issues

Artificial

Intelligence And Information - Proceedings Of The 6th International Conference Ivan Plander,1994-08-04 These proceedings comprise about 50 contributions from experts worldwide The major themes covered include knowledge based and expert systems cognitive modeling neural networks and AI image processing and computational geometry and parallel distributed and decentralised architecture for AI and robotics

Parallel Computation and Computers for Artificial Intelligence J.S. Kowalik,2012-12-06 It has been widely recognized that artificial intelligence computations offer large potential for distributed and parallel processing Unfortunately not much is known about designing parallel AI algorithms and efficient easy to use parallel computer architectures for AI applications The field of parallel computation and computers for AI is in its infancy but some significant ideas have appeared and initial practical experience has become available The purpose of this book has been to collect in one volume contributions from several leading researchers and pioneers of AI that represent a sample of these ideas and experiences This sample does not include all schools of thought nor contributions from all leading researchers but it covers a relatively wide variety of views and topics and in this sense can be helpful in assessing the state of the art We hope that the book will serve at least as a pointer to more specialized literature and that it will stimulate interest in the area of parallel AI processing It has been a great pleasure and a privilege to cooperate with all contributors to this volume They have my warmest thanks and gratitude Mrs Birgitta Knapp has assisted me in the editorial task and demonstrated a great deal of skill and patience Janusz S Kowalik vii

Massively Parallel AI David Waltz,1990 Today s massively parallel machines present AI with a golden opportunity to make an impact especially in the world of commercial applications The most striking near term opportunity is in the marriage of research on very large databases with case based and memory based AI Moreover such applications are steps on a path that can lead eventually to a class of truly intelligent systems
