Parallel Computational Fluid Dynamics:

An Introduction to Parallel Computational Fluid Dynamics F. Pappetti, S. Succi, 1996 Introduction to Parallel Computational Fluid Dynamics *Parallel Computational Fluid Dynamics '97* D. Emerson, P. Fox, N. Satofuka, A. Ecer, Jacques Periaux, 1998-04-17 Computational Fluid Dynamics CFD is a discipline that has always been in the vanguard of the exploitation of emerging and developing technologies Advances in both algorithms and computers have rapidly been absorbed by the CFD community in its quest for more accurate simulations and reductions in the time to solution Within this context parallel computing has played an increasingly important role Moreover the uptake of parallel computing has brought the CFD community into ever closer contact with hardware vendors and computer scientists The multidisciplinary subject of parallel CFD and its rapidly evolving nature in terms of hardware and software requires a regular international meeting of this nature to keep abreast of the most recent developments Parallel CFD 97 is part of an annual conference series dedicated to the discussion of recent developments and applications of parallel computing in the field of CFD and related disciplines This was the 9th in the series and since the inaugural conference in 1989 many new developments and technologies have emerged The intervening years have also proved to be extremely volatile for many hardware vendors and a number of companies appeared and then disappeared However the belief that parallel computing is the only way forward has remained undiminished Moreover the increasing reliability and acceptance of parallel computers has seen many commercial companies now offering parallel versions of their codes many developed within the EC funded EUROPORT activity but generally for more modest numbers of processors It is clear that industry has not moved to large scale parallel systems but it has shown a keen interest in more modest parallel systems recognising that parallel computing will play an important role in the future This book forms the proceedings of the CFD 97 conference which was organised by the Computational Engineering Group at Daresbury Laboratory and held in Manchester England on May 19 21 1997 The sessions involved papers on many diverse subjects including turbulence reactive flows adaptive schemes unsteady flows unstructured mesh applications industrial applications developments in software tools and environments climate modelling parallel algorithms evaluation of computer architectures and a special session devoted to parallel CFD at the AEREA research centres This year's conference like its predecessors saw a continued improvement in both the quantity and quality of contributed papers Since the conference series began many significant milestones have been achieved For example in 1994 Massively Parallel Processing MPP became a reality with the advent of Cray T3D This of course has brought with it the new challenge of scalability for both algorithms and architectures In the 12 months since the 1996 conference two more major milestones were achieved microprocessors with a peak performance of a Gflop/s became available and the world's first Tflop/s calculation was performed In the 1991 proceedings the editors indicated that a Tflop/s computer was likely to be available in the latter half of this decade On December 4th 1996 Intel achieved this breakthrough on the Linpack benchmark using 7 264 200MHz

Pentium Pro microprocessors as part of the ASCI Red project With the developments in MPP the rapid rise of SMP architectures and advances in PC technology the future for parallel CFD looks both promising and challenging **Parallel Computational Fluid Dynamics 2000** C.B. Jenssen,T. Kvamdal,H.I. Andersson,B. Pettersen,P. Fox,N. Satofuka,A. Ecer,Jacques Periaux,2001-04-27 Parallel CFD 2000 the Twelfth in an International series of meetings featuring computational fluid dynamics research on parallel computers was held May 22 25 2000 in Trondheim Norway Following the trend of the past conferences areas such as numerical schemes and algorithms tools and environments load balancing as well as interdisciplinary topics and various kinds of industrial applications were all well represented in the work presented In addition for the first time in the Parallel CFD conference series the organizing committee chose to draw special attention to certain subject areas by organizing a number of special sessions We feel the emphasis of the papers presented at the conference reflect the direction of the research within parallel CFD at the beginning of the new millennium It seems to be a clear tendency towards increased industrial exploitation of parallel CFD Several presentations also demonstrated how new insight is being achieved from complex simulations and how powerful parallel computers now make it possible to use CFD within a broader interdisciplinary setting Obviously successful application of parallel CFD still rests on the underlying fundamental principles Therefore numerical algorithms development tools and parallelization techniques are still as important as when parallel CFD was in its infancy Furthermore the novel concepts of affordable parallel computing as well as metacomputing show that exciting developments are still taking place As is often pointed out however the real power of parallel CFD comes from the combination of all the disciplines involved Physics mathematics and computer science This is probably one of the principal reasons for the continued popularity of the Parallel CFD Conferences series as well as the inspiration behind much of the excellent work carried out on the subject We hope that the papers in this book both on an individual basis and as a whole will contribute to that inspiration Further details of Parallel CFD 99 as well as other conferences in this series are available at <http://www.parcfd.org> *Parallel Computational Fluid Dynamics '95* A.
