Parallel Logic Programming In Parlog:

Parallel Logic Programming in PARLOG Steve Gregory,1987 PARLOG is a logic programming language designed for efficient implementation on parallel machines It supports a declarative style of programming combined with an execution mechanism that can exploit the parallel architectures which are already available This book is a comprehensive study of the design application and implementation of PARLOG Parlog, a Parallel Logic Programming Language K. L. Clark, Steve Gregory,1983 *P-prolog: A Parallel Logic Programming Language* Rong Yang,1988-01-01 P Prolog is put forward as an alternative proposal to the difficulties faced in the main research areas of parallel logic programmings which have been studied P Prolog provides the advantages of guarded Horn clauses while retaining don t know non determinism where required This monograph presents also an or tree model and an implementation scheme for it to combine and and or parallelism with reasonable efficiency The model and implementation scheme discussed can be applied to P Prolog and other parallel logic languages Parallel Execution of Parlog Andrew Cheese,1992-05-20 This monograph concentrates on the implementation of concurrent logic programming languages on loosely coupled parallel computer architectures Two different abstract models are also considered a graph reduction based model and a more imperative approach The design of a specialized instruction set is presented that is general enough to be used for the whole family of concurrent logic programming languages In particular the language Parlog is concentrated upon because it is the most efficiently implementable of all the non flat logic programming languages Other issues arising from the implementation of a programming language are discussed in particular the design of a load balancing scheme which deals with the large number of short lived processes inherent in a correct language implementation Detailed descriptions of all the data structures and synchronisation algorithms are also presented Resource exhaustion is also discussed and handled within the implementations Detailed performance results for both models of computation are given From the material it should be possible for the reader to create an implementation **PARLOG** Keith L.
