One hundred important questions facing plant science: an international perspective

Summary

The 'One Hundred Important Questions Facing Plant Science Research' project aimed to capture a global snapshot of the current issues and future questions facing plant science. This revisiting builds on the original 2011 paper. Over 600 questions were collected from anyone interested in plants, which were reduced to a final list of 100 by four teams of global panelists. There was remarkable consensus on the most important topics between the global subpanels. We present the top 100 most important questions facing plant science in 2022, ranging from how plants can contribute to tackling climate change, to plant-defence priming and epigenome plasticity. We also provide explanations of why each question is important. We demonstrate how focussing on climate change, community and protecting plant life has become increasingly important for plant science over the past 11 years. This revisiting illustrates the collaborative and international need for long-term funding of plant science research, alongside the broad community-driven efforts to actively ameliorate and halt climate change, while adapting to its consequences.

Introduction

Since the original 'One Hundred Important Questions Facing Plant Science Research' paper was published in 2011 (Grierson *et al.*, 2011), plant research continues to be of critical importance to global academic, commercial and policymaking communities. The world's growing population needs plant science to help deliver safe and reliable food, fuel, building materials, textiles and paper; but global inequalities exacerbated by a changing climate mean these basic requirements are frequently not realised equitably. Equally, plants provide a critical avenue for climate change deceleration (Boran & Dorsey, 2018). By revisiting the 'One Hundred Important Questions Facing Plant Science Research' project in 2022, we horizon-scan for new areas of pressing research, while including voices from historically excluded communities.

We sought questions about plants, plant science and plant research from diverse sources, ranging from the botanically curious

nonexpert to those with years of plant-focused research expertise. Our panel of experts was chosen to reflect the diverse interests of plant research around the world, with 10 each from both the Global North and South. Our panelists' interests are broad and diverse, ranging from palaeobotany to conservation ecology, agricultural economics and cell biology. A full list of panelists' interests and expertise is available in Supporting Information [Notes S1](#). We ensured that gender balance was met and included voices of those typically excluded from global conversations about plant research to ensure decisions were as inclusive and representative of global communities as possible.

Here, we present the outcome of a global collaboration to identify emerging plant research themes. Since our first 2011 publication, horizon scanning has become a key part of research engagement and policy in many fields (Blumenau *et al.*, 2019; Goddard *et al.*, 2021; Glasco *et al.*, 2022), and we hope both our methods and outcomes contribute constructively to these important conversations. We provide extensive descriptions for each question in [Notes S2](#), to clarify what each question means, summarise relevant background information and explain why we consider each question important.

We had three goals:

- (1) Stimulate discussion between often disconnected areas of plant science and related communities, while horizon-scanning key areas for future research;
- (2) Encourage plant scientists to think beyond the limits of their own research and consider the most important research that could be undertaken;
- (3) Include historically excluded voices and elicit both region-specific and globally relevant questions.

To achieve these goals, we followed a modified Delphi protocol based on Sutherland *et al.* (2008) to identify the 100 most important questions currently facing the global plant science community. This project began when question collection opened on 18 May 2021 and finished on 30 September 2022.

Question collection

Questions were collected virtually from 18 May 2021 to 31 January 2022 at <https://tinyurl.com/100PlantScienceQuestions>. Question submission was promoted using social media platforms (Facebook, Twitter and Instagram), international and national plant-focused mailing lists, internal communications across global higher education and research institutions, word-of-mouth, direct contact, newsletters and press releases. Plant-focused institutions around the world were also contacted, as were farming unions. Emphasis was placed upon contacting plant-focused research institutions outside the Global North. Data were collected on
