Similarity Problems And Completely Bounded Maps:

   Similarity Problems and Completely Bounded Maps Gilles Pisier,2013-11-11 These notes revolve around three similarity problems appearing in three dif ferent contexts but all dealing with the space B H of all bounded operators on a complex Hilbert space H The first one deals with group representations the second one with C algebras and the third one with the disc algebra We describe them in detail in the introduction which follows This volume is devoted to the background necessary to understand these three open problems to the solutions that are known in some special cases and to numerous related concepts results counterexamples or extensions which their investigation has generated For instance we are naturally lead to study various Banach spaces formed by the matrix coefficients of group representations Furthermore we discuss the closely connected Schur multipliers and Grothendieck s striking characterization of those which act boundedly on B H While the three problems seem different it is possible to place them in a common framework using the key concept of complete boundedness which we present in detail In some sense completely bounded maps can also be viewed as spaces of coefficients of C algebraic representations if we allow B H valued coefficients this is the content of the fundamental factorization property of these maps which plays a central role in this volume Using this notion the three problems can all be formulated as asking whether boundedness implies complete boundedness for linear maps satisfying cer tain additional algebraic identities **Featured Reviews in Mathematical Reviews 1997-1999** Donald G. Babbitt,Jane E. Kister,2000-05-05 This second volume of Featured Reviews makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999 Also included are excellent reviews of several classic books and articles published prior to 1970 Among those reviews for example are the following Homological Algebra by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild Faisceaux algebriques coherents by Jean Pierre Serre reviewed by C Chevalley and On the Theory of General Partial Differential Operators by Lars Hormander reviewed by J L Lions In particular those seeking information on current developments outside their own area of expertise will find the volume very useful By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR *Operator Methods in Wavelets, Tilings, and Frames* Keri A. Kornelson,Eric S. Weber,2014-10-20 This volume contains the proceedings of the AMS Special Session on Harmonic Analysis of Frames Wavelets and Tilings held April 13 14 2013 in Boulder Colorado Frames were first introduced by Duffin and Schaeffer in 1952 in the context of nonharmonic Fourier series but have enjoyed widespread interest in recent years particularly as a unifying concept Indeed mathematicians with backgrounds as diverse as classical and modern harmonic analysis Banach space theory operator algebras and complex analysis have recently worked in frame theory Frame theory appears in the context of wavelets spectra and tilings sampling theory and more The papers in this volume touch on a wide variety of topics

including convex geometry direct integral decompositions Beurling density operator valued measures and splines These varied topics arise naturally in the study of frames in finite and infinite dimensions In nearly all of the papers techniques from operator theory serve as crucial tools to solving problems in frame theory This volume will be of interest not only to researchers in frame theory but also to those in approximation theory representation theory functional analysis and harmonic analysis **Banach Space Aspects of Frame Theory with Applications** Deguang Han,Qianfeng Hu,Bei Liu,Rui Liu,2026-02-16 This book provides an introduction to frame theory in Banach and Hilbert spaces with a particular focus on the Banach space aspects of the frame theory and its applications The authors present main developments from recent decades in the theory of frames dilations operator valued measures sampling and related applications By bridging topics from Banach space geometry applied harmonic analysis and quantum information theory the book highlights a novel perspective frame theory not only serves as a powerful and central tool in mathematics and engineering but is also deeply intertwined with the structure and theory of Banach spaces Rather than providing an exhaustive treatment the book offers a broadly relevant and accessible overview that enables researchers across various fields to quickly grasp the foundational ideas and explore related research directions Canadian Mathematical Bulletin ,1992-06 St. Petersburg Mathematical Journal ,2004 Operator Algebras and Applications Aristides Katavolos,1997-06-30 The proceedings of the August 1996 conference contain the 15 contributions of the main speakers Themes include operator spaces abstract operator algebras and their Hilbert modules interaction with ring theory non self adjoint operator algebras limit algebras reflexive algebras and subspaces relations to basis theory C algebraic quantum groups endomorphisms of operator algebras conditional expectations and projection maps and applications particularly to wavelet theory A special lecture given by Stelios Negrepontis on the Pythagoreans is also presented Annotation copyrighted by Book News Inc Portland OR *Pacific Journal of Mathematics* ,1996 *Books In Print 2004-2005* Ed Bowker Staff,Staff Bowker, Ed,2004 Probabilities on the Heisenberg Group Daniel Neuenschwander,1996-08-19 This volume constitutes the proceedings of the Third International Workshop of the European Association for Machine Translation held in Heidelberg Germany in April 1993 The EAMT Workshops traditionally aim at bringing together researchers developers users and others interested in the field of machine or computer assisted translation research development and use The volume presents thoroughly revised versions of the 15 best workshop contributions together with an introductory survey by the volume editor The presentations are centered primarily on questions of acquiring sharing and managing lexical data but also address aspects of lexical description **American Book Publishing Record** ,2001 *Extracta Mathematicae* ,1997 **Whitaker's Books in Print** ,1998 **Mathematical Reviews** ,2005 **JMSJ** Nihon Sūgakkai,2006 **Spaces of Homotopy Self-Equivalences - A Survey** John W. Rutter,1997-08-25 This survey covers groups of homotopy self equivalence classes of topological spaces and the homotopy type of spaces of homotopy self equivalences For manifolds the full group of equivalences and the mapping

class group are compared as are the corresponding spaces Included are methods of calculation numerous calculations finite generation results Whitehead torsion and other areas Some 330 references are given The book assumes familiarity with cell complexes homology and homotopy Graduate students and established researchers can use it for learning for reference and to determine the current state of knowledge   **Houston Journal of Mathematics** ,1994   *Galois Theory of Difference Equations* Marius van der Put,Michael F. Singer,1997-09-18 This book lays the algebraic foundations of a Galois theory of linear difference equations and shows its relationship to the analytic problem of finding meromorphic functions asymptotic to formal solutions of difference equations Classically this latter question was attacked by Birkhoff and Tritzinsky and the present work corrects and greatly generalizes their contributions In addition results are presented concerning the inverse problem in Galois theory effective computation of Galois groups algebraic properties of sequences phenomena in positive characteristics and q difference equations The book is aimed at advanced graduate researchers and researchers

   Completely Bounded Maps and Dilations Vern I. Paulsen,1986   Tomita-Takesaki Theory in Algebras of Unbounded Operators Atsushi Inoue,1998-11-18 These notes are devoted to a systematic study of developing the Tomita Takesaki theory for von Neumann algebras in unbounded operator algebras called O algebras and to its applications to quantum physics The notions of standard generalized vectors and standard weights for an O algebra are introduced and they lead to a Tomita Takesaki theory of modular automorphisms The Tomita Takesaki theory in O algebras is applied to quantum moment problem quantum statistical mechanics and the Wightman quantum field theory This will be of interest to graduate students and researchers in the field of unbounded operator algebras and mathematical physics
