Study Guide and Review Manual of Human Anatomy: Regional, Systemic, Applied. By Moore KL, Nathaniel EJJ, Hoshino, K, et al. Philadelphia, W. B. Saunders Co, 1976, paper, 356 pp, illus, \$7.50

The authors' goal in this book, which might be classified as a modified programmed text, is to define instructional objectives of an anatomy course. The book is designed "to produce a physician who, at graduation, is able to embark upon any one of the potential pathways of graduate education and practice." The thrust of the book is the acquisition of a solid foundation of anatomical knowledge. The authors further extend to students the challenge to accept the responsibility for their continuing education; clearly a responsibility too often ignored by many professionals.

The authors' objectives to present a study guide and review of "core" anatomy by region and system are clearly met. At the beginning of each of the first seven chapters the objectives are briefly stated. Review questions follow which test students' knowledge and the extent to which chapter objectives have been met. Succeeding chapters are review examinations of the content in the first seven chapters and are based on the pertinent objectives of each chapter.

The book is simple, clearly outlined, easy to follow, and includes three parts of seven chapters each. Part I consists of regional anatomy and is cross-referenced to five major reference texts. Part II consists of review examinations by systems; Part III, of review examinations by regions. The book includes answer sheets, notes and

explanations accompanying the answers, a time guide and performance standards based on the expectations of the authors.

For the most part illustrations are line drawings with stippling or shading for emphasis; some are photographs of radiographs. All illustrations are small and most are simplified and intended for emphasis, review, or as an adjunct to examination questions. The student is expected to use the reference books as the primary source of illustrations and basic information.

This book would be particularly useful for any serious student's study of anatomy, whether his field is physical therapy, medicine, dentistry, or nursing. If a particular objective is believed to be unnecessary, that section can be de-emphasized or omitted. The text would be useful for many types of courses and needs. It would be particularly useful as a review for final examinations, or board examinations, and for periodic review by practitioners.

Providing Programs for the Gifted Handicapped. By Maker CJ. Reston, VA, Council for Exceptional Children, 1977, paper, 171 pp. \$6.50

The author of this book presents an interesting hypothesis for consideration: the incidence of giftedness among handicapped children may be the same as among nonhandicapped children. There is food for thought in this book for both therapists and educators working with handicapped children. The author expresses concern that we may be so concerned with strengthening weaknesses, overcoming deficits, and teaching a child to cope with his
