Protected areas have become an increasingly important tool both in the conservation of biodiversity and in revenue generation through sustainable use. This is the only sure way to guarantee the protection necessary for many species habitats and ecosystems in the future. Integrated Protected Area Management features contributions that consider the design, management and sustainable use of these regions. Three principal aspects are considered: the theory and practice of designation, community based conservation and the concept of sustainability, identifying priorities for management. The emphasis throughout is on the importance of an interdisciplinary approach to planning and the active involvement of all stakeholders in decision making processes as a means of ensuring long term sustainability.

Guidelines for protected area management planning Karadeniz N., Yenilmez Arpa, N., 2022-07-01. Management planning guidelines represent the second major step in the process for planning protected areas following implementation of the Establishment Guidelines. This publication was developed as a part of the Conservation and Sustainable Management of Turkey's Steppe Ecosystem Project. It is one of seven sets of guidelines designed for the development of recommendations and strategies for the management of the country's natural assets. These guidelines are based on international and national standards and are divided into 15 steps for successful management. A fundamental pre-condition for any form of management planning is clear definition of the overall management objectives to be achieved. These management objectives are linked to the IUCN protected area categories which form the basis for the guidelines. Important recommendations for successful management include the creation of thematic preparatory maps on topography, habitats, borders and zones, and habitat based planning. The guidelines provide basic recommendations for the integration of global trends and requirements connected with nature conservation and protected areas into the protected area management process. A central element of this process is the management plan which sets out the management approach and goals together with a framework for decision making to be applied in the protected area over a given period of time. The management plan is usually valid for a period of 10 years but may include a mid-term review. Changes can only be made to the plan on the basis of ecological or natural reasons.

Guidelines For Management Planning Of Protected Areas Lee Thomas, Julie Middleton, 2003. A Management Plan is a document which sets out the management approach and goals together with a framework for decision making to apply in a specific protected area over a given period of time. Critical to the plan is the widest possible consultation with stakeholders and the development of objectives that can be agreed and adhered to by all who have an interest in the use and ongoing survival of the area concerned. These Guidelines based on global best practice drawn from many areas around the world represent a working framework for protected area planners to consider and adapt to their needs and circumstances.
