Physics of Binary Star Evolution Thomas M.

Tauris, Edward P.J. van den Heuvel, 2023-03-28 A graduate level textbook on the astrophysics of binary star systems and their evolution

Physics of Binary Star Evolution is an up to date textbook on the astrophysics and evolution of binary star systems

Theoretical astrophysicists Thomas Tauris and Edward van den Heuvel cover a wide range of phenomena and processes

including mass transfer and ejection common envelopes novae and supernovae X ray binaries millisecond radio pulsars and

gravitational wave GW sources and their links to stellar evolution The authors walk through the observed properties and

evolution of different types of binaries with special emphasis on those containing compact objects neutron stars black holes

and white dwarfs Attention is given to the formation mechanisms of GW sources merging double neutron stars and black

holes as well as ultra compact GW binaries hosting white dwarfs and to the progenitors of these sources and how they are

observed with radio telescopes X ray satellites and GW detectors LIGO Virgo KAGRA Einstein Telescope Cosmic Explorer and

LISA Supported by illustrations equations and exercises Physics of Binary Star Evolution combines theory and observations

to guide readers through the wonders of a field that will play a central role in modern astrophysics for decades to come 465

equations 47 tables and 350 figures More than 80 exercises analytical numerical and computational Over 2 500 extensive up

to date references *The Design of Science, Evolution, the Environment, and Redemption* Jim Keck, 2022-07-18 Don't send

your kids off to college without this book especially if they will be engaged in the sciences or philosophy The Design of

Science Evolution the Environment and Redemption will clarify the differences scientific basis and logical foundation for the

two most dominating and competing worldviews we have adopted in western society nowadays namely science and religion

After reading this book you will be able to better understand articulate and defend what you believe and why As a society in

general we need to understand the basis of our morality and culture and how science and religion each have a role to play

Just a few of the types of questions answered are Is there really competition and conflict between science and religion What

is the technological and philosophical scope of science How does our worldview affect the development of morality and virtue

both individually and collectively Do we really need to be concerned about global environmental changes Which type of

worldview does the best job of providing answers to the tough questions on origin purpose environmental issues morality

government and eternity Is a belief in God and the Bible part of the evolutionary process Written by a mechanical engineer

with more than thirty years of design and R D experience The Design of Science Evolution the Environment and Redemption

lays out in a clear concise easy to read and entertaining manner much of the science logic and data used by academia and

the media to answer life's toughest questions as compared to the biblical Judeo-Christian tradition. This book explores how we can measure the truthfulness, accuracy, and scope of these worldviews and how they can affect us personally, spiritually, and culturally. The answers are logically, spiritually, and technically robust, as well as just plain surprising in many ways.

Logical Empiricism and the Physical Sciences Sebastian Lutz, Adam Tamas Tuboly, 2021-04-26. This volume has two primary aims: to trace the traditions and changes in methods, concepts, and ideas that brought forth the logical empiricists' philosophy of physics, and to present and analyze the logical empiricists' various and occasionally contrary ideas about the physical sciences and their philosophical relevance. These original chapters discuss these developments in their original contexts and social and institutional environments, thus showing the various fruitful conceptions and philosophies behind the history of 20th-century philosophy of science. Logical Empiricism and the Natural Sciences is divided into three thematic sections. Part I surveys the influences on logical empiricism's philosophy of science and physics. It features chapters on Maxwell's role in the worldview of logical empiricism, on Reichenbach's account of objectivity, on the impact of Poincaré on Neurath's early views on scientific method, on Frank's exchanges with Einstein about philosophy of physics, and on the forgotten role of Kurt Grelling. Part II focuses on specific physical theories, including Carnap's and Reichenbach's positions on Einstein's theory of general relativity, Reichenbach's critique of unified field theory, and the logical empiricists' reactions to quantum mechanics. The third and final group of chapters widens the scope to philosophy of science and physics in general. It includes contributions on von Mises' frequentism, Frank's account of concept formation and confirmation, and the interrelations between Nagel's, Feigl's, and Hempel's versions of logical empiricism. This book offers a comprehensive account of the logical empiricists' philosophy of physics. It is a valuable resource for researchers interested in the history and philosophy of science, philosophy of physics, and the history of analytic philosophy.

Science Education Shamin Padalkar, Mythili Ramchand, Rafikh Shaikh, Indira Vijaysimha, 2022-07-26. The book presents key perspectives on teaching and learning science in India. It offers adaptive expertise to teachers and educators through a pedagogical content knowledge (PCK) approach. Using cases and episodes from Indian science classrooms, it contextualises ideas and practices. The volume discusses the nature of science and aspects of assessments and evaluations for both process skills and conceptual understanding of the subject. It examines the significance of science education at school level and focuses on meaningful learning and development of scientific and technological aptitude. The chapters deal with topics from physics, chemistry, and biology at the middle and secondary school levels and are designed to equip student teachers with theoretical and practical knowledge, abilities about science, science learning, and the abilities to teach these topics along with teaching. The book draws extensively from research on science education and teacher education and shifts away from knowledge transmission to the active process of constructivist teaching-learning practices. The authors use illustrative examples to highlight flexible planning for inclusive classrooms. Based on studies on cognitive and developmental psychology, pedagogical content knowledge of science, socio-

cultural approaches to learning science and the history and philosophy of science the book promotes an understanding of science characterized by empirical criteria logical arguments and sceptical reviews With its accessible style examples exercises and additional references it will be useful for students and teachers of science science educators BEd and MEd programmes for education secondary and higher secondary school teachers curriculum designers and developers of science It will interest research institutes non governmental organisations professionals and public and private sector bodies involved in science outreach science education and teaching and learning practices [Encyclopedia of Physical Science and Technology](#) Robert A.
