Muscle Development Mark L. Pearson, Henry F. Epstein, 1982 *Molecular and Cellular Control of Muscle Development*

Steinberg, 2013-06-29 This series was established to create comprehensive treatises on specific topics in developmental
biology Such volumes serve a useful role in developmental biology since it is a very diverse field that receives contributions
from a wide variety of disciplines This series is a meeting ground for the various practitioners of this science facilitating an
integration of heterogeneous information on specific topics Each volume is intended to provide the conceptual basis for a
comprehensive understanding of its topic as well as an analysis of the key experiments upon which that understanding is
based The specialist in any aspect of developmental biology should understand the experimental background of the field and
be able to place that body of information in context to ascertain where additional research would be fruitful At that point the
creative process generates new experiments This series is intended to be a vital link in that ongoing process of learning and
discovery **The Journal of Cell Biology** ,1994 No 2 pt 2 of November issue each year from v 19 1963 47 1970 and v 55

Narahashi, 1988-02-29 A wealth of information has been accumulated about the function of ion channels of excitable cells
since the extensive and pioneering voltage clamp studies by Hodgkin Huxley and Katz 36 years ago The study of ion chan-
nels has now reached a stage at which a quantum jump in progress is anticipated There are many good reasons for this
Patch clamp techniques originally developed by Neher and Sakmann 12 years ago have made it possible to study the
function of ion channels in a variety of cells Membrane ionic currents can now be recorded practically from many types of
cells using the whole cell patch clamp technique The opening and closing of individual ion channels can be analyzed using
the single channel patch clamp method Techniques have also been developed to incorporate purified ion channels into lipid
bilayers to reconstitute an excitable membrane Advanced techniques developed in molecular biology genetics and
immunology such as gene cloning and the use of monoclonal antibodies are now being applied to the study of ion channels A
variety of drugs have now been found or are suspected to interact with ion channels to exert therapeutic effects In addition
to the classical examples as represented by local anesthetics many other drugs including calcium antagonists psychoactive
drugs cardiac drugs and anticonvulsants shown to alter ion channel function For certain pesticides such as have been
pyrethroids and DDT sodium channels are clearly the major target site Recent Progress of Natural Sciences in Japan
