

How do seeds travel?

Today's mission: To explore how seeds move to different locations from their mother plants

What you need:

△ Adult help
 'seeds' e.g. from a spice jar, a seed packet, tea from a teabag or paper dots from a hole punch
 balloon ruler

Let's get started! Have you blown a dandelion 'clock'?

Have you stuck goosegrass ('stickybud') to a friend?

Today we're thinking about how seeds disperse (move away from 'home'). These show cunning ways that plants 'travel' so their baby plantlets have the room to grow.

Match these to the 'method of dispersion'? (one is done)

acorn	poppy seed	sycamore	coconut	burdock
eaten by animals	blown by the wind	explosive seedpods	hooked to animals	transported by water

Model some of these dispersion methods and measure how far you can make your 'seeds' travel. Do this outside, in a shower tray/bath and with an adult (who can advise on reducing the mess!). First put 20 or more real or fake 'seeds' in a balloon, blow it up then pop it. Now hold some seeds on an open hand and blow them. If you have small enough 'seeds', use water to whoosh them down the drain.

How far has your 'explosive seedpod' thrown the 'seed'?

How far have the 'wind' blown ones travelled?

... What about the water dispersed ones?

Record your results in a table:

Method of dispersion	How far it travelled (cm)
Explosive seedpods	
'Wind' blown	
Water transport	

Date done:
