Plausible Neural Networks For Biological Modelling:

Plausible Neural Networks for Biological Modelling H.A. Mastebroek, J.E. Vos, 2012-12-06 The expression Neural Networks refers traditionally to a class of mathematical algorithms that obtain their proper performance while they learn from examples or from experience As a consequence they are suitable for performing straightforward and relatively simple tasks like classification pattern recognition and prediction as well as more sophisticated tasks like the processing of temporal sequences and the context dependent processing of complex problems Also a wide variety of control tasks can be executed by them and the suggestion is relatively obvious that neural networks perform adequately in such cases because they are thought to mimic the biological nervous system which is also devoted to such tasks As we shall see this suggestion is false but does not do any harm as long as it is only the final performance of the algorithm which counts Neural networks are also used in the modelling of the functioning of sub systems in the biological nervous system It will be clear that in such cases it is certainly not irrelevant how similar their algorithm is to what is precisely going on in the nervous system Standard artificial neural networks are constructed from units roughly similar to neurons that transmit their activity similar to membrane potentials or to mean firing rates to other units via weight factors similar to synaptic coupling efficacies

Advances in Machine Learning II Jacek Koronacki, Zbigniew W. Ras, Slawomir T. Wierzchon, 2009-12-24 This is the second volume of a large two volume editorial project we wish to dedicate to the memory of the late Professor Ryszard S Michalski who passed away in 2007 He was one of the fathers of machine learning an exciting and relevant both from the practical and theoretical points of view area in modern computer science and information technology His research career started in the mid 1960s in Poland in the Institute of Automation Polish Academy of Sciences in Warsaw Poland He left for the USA in 1970 and since then had worked there at various universities notably at the University of Illinois at Urbana Champaign and finally until his untimely death at George Mason University We the editors had been lucky to be able to meet and collaborate with Ryszard for years indeed some of us knew him when he was still in Poland After he started working in the USA he was a frequent visitor to Poland taking part at many conferences until his death We had also witnessed with a great personal pleasure honors and awards he had received over the years notably when some years ago he was elected Foreign Member of the Polish Academy of Sciences among some top scientists and scholars from all over the world including Nobel prize winners Professor Michalski's research results influenced very strongly the development of machine learning data mining and related areas Also he inspired many established and younger scholars and scientists all over the world We feel very happy that so many top scientists from all over the world agreed to pay the last tribute to Professor Michalski by writing papers in their areas of research These papers will constitute the most appropriate tribute to Professor Michalski a devoted scholar and researcher Moreover we believe that they will inspire many newcomers and younger researchers in the area of broadly perceived machine learning data analysis and data mining The papers included in the two volumes Machine Learning I and

Machine Learning II cover diverse topics and various aspects of the fields involved For convenience of the potential readers we will now briefly summarize the contents of the particular chapters
