Stephen J. Andriole,1993-09-24      **Microcomputer Decision Support Systems** Stephen J. Andriole,1986      **Annual Report** U.S. Army Research Institute for the Behavioral and Social Sciences,1987      *Encyclopedia of Computer Science and Technology* Allen Kent,James G. Williams,2024-08-16 This comprehensive reference work provides immediate fingertip access to state of the art technology in nearly 700 self contained articles written by over 900 international authorities Each article in the Encyclopedia features current developments and trends in computers software vendors and applications extensive bibliographies of leading figures in the field such as Samuel Alexander John von Neumann and Norbert Wiener and in depth analysis of future directions      *Mathematical Models for Decision Support* Harvey J. Greenberg,Gautam Mitra,Frerik A. Lootsma,Marcel J. Rijckaert,Hans J. Zimmermann,2012-12-06 It is quite an onerous task to edit the proceedings of a two week long institute with learned contributors from many parts of the world All the same the editorial team has found the process of refereeing and reviewing the contributions worthwhile and completing the volume has proven to be a satisfying task In setting up the institute we had considered models and methods taken from a number of different disciplines As a result the whole institute preparing for it attending it and editing the proceedings proved to be an intense learning experience for us Here I speak on behalf of the committee and the editorial team By the time the institute took place the papers were delivered and the delegates exchanged their views the structure of the topics covered and their relative positioning appeared in a different light In editing the volume I felt compelled to introduce a new structure in grouping the papers The contents of this volume are organised in eight main sections set out below 1 Abstracts 2 Review Paper 3 Models with Multiple Criteria and Single or Multiple Decision Makers 4 Use of Optimisation Models as Decision Support Tools 5 Role of Information Systems in Decision Making Database and Model Management Issues 6 Methods of Artificial Intelligence in Decision Making Intelligent Knowledge Based Systems 7 Representation of Uncertainty in Mathematical Models and Knowledge Based Systems 8 Mathematical Basis for Constructing Models and Model Validation      **Handbook for Evaluating Knowledge-Based Systems** Leonard Adelman,Sharon L. Riedel,2012-12-06 Knowledge based systems are increasingly found in a wide variety of settings and this handbook has been written to meet a specific need in their widening use While there have been many successful applications of knowledge based systems some applications have failed because they never received the corrective feedback that evaluation provides for keeping development focused on the users needs in their actual working environment This handbook provides a conceptual framework and compendium of methods for performing evaluations of knowledge based systems during their development Its focus is on the users and subject matter experts evaluation of the usefulness of the system and not on the developers testing of the adequacy of the programming code The handbook permits evaluators to systematically answer the following kinds of questions Does the knowledge based

system meet the users task requirements Is the system easy to use Is the knowledge base logically consistent Does it meet the required level of expertise Does the system improve performance The authors have produced a handbook that will serve two audiences a tool that can be used to create knowledge based systems practitioners developers and evaluators and a framework that will stimulate more research in the area academic researchers and students To accomplish this the handbook is built around a conceptual framework that integrates the different types of evaluations into the system of development process The kinds of questions that can be answered and the methods available for answering them will change throughout the system development life cycle And throughout this process one needs to know what can be done and what can t It is this dichotomy that addresses needs in both the practitioner and academic research audiences

**Information Technology Management** Jay Liebowitz,1998-07-27 Mainly based on the author s personal experiences with a variety of organizations this succinct book presents short cases anecdotes and vignettes describing the management of information technology Information Technology Management includes numerous case studies primarily focusing on business industry and government systems This singular resource serves expert systems managers and information technology managers and developers Although the material emphasizes those cases involving management relating to expert systems technology the reader can replace the term expert system with information system technology in almost all the case studies as many of the lessons generally hold true for information systems
