## **Pattern Classification:**

*Pattern Classification* Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field. Now with the second edition, readers will find information on key new topics such as neural networks and statistical pattern recognition, the theory of machine learning, and the theory of invariances. Also included are worked examples, comparisons between different methods, extensive graphics, expanded exercises, and computer project topics. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

*Computer Manual in MATLAB to accompany Pattern Classification* David G. Stork, Elad Yom-Tov, 2004-04-08 Computer Manual to Accompany Pattern Classification and its associated MATLAB software is an excellent companion to Duda Pattern Classification 2nd ed. The code contains all algorithms described in Duda as well as supporting algorithms for data generation and visualization. The Manual uses the same terminology as the Duda text and contains step by step worked examples including many of the examples and figures in the textbook. The Manual is accompanied by software that is available electronically. The software contains all algorithms in Duda indexed to the textbook and uses symbols and notation as close as possible to the textbook. The code is self-annotating so the user can easily navigate, understand, and modify the code.

*Soft Computing Approach to Pattern Classification and Object Recognition* Kumar S. Ray, 2012-10-06 Soft Computing Approach to Pattern Classification and Object Recognition establishes an innovative unified approach to supervised pattern classification and model-based occluded object recognition. The book also surveys various soft computing tools: fuzzy relational calculus, FRC, genetic algorithm, GA, and multilayer perceptron, MLP, to provide a strong foundation for the reader. The supervised approach to pattern classification and model-based approach to occluded object recognition are treated in one framework, one based on either a conventional interpretation or a new interpretation of multidimensional fuzzy implication, MFI, and a novel notion of fuzzy pattern vector, FPV. By combining practice and theory, a completely independent design methodology was developed in conjunction with this supervised approach on a unified framework and then tested thoroughly against both synthetic and real-life data. In the field of soft computing, such an application-oriented design study is unique in nature. The monograph essentially mimics the cognitive process of human decision making and carries a message of perceptual integrity in representational diversity. Soft Computing Approach to Pattern Classification and Object Recognition is intended for researchers in the area of pattern classification and computer vision. Other academics and practitioners will also find the book valuable.
