Particle Hunters:

The Particle Hunters Yuval Ne'eman, Yoram Kirsh, 1996-04-04 From the recent discovery of the top quark to the search for the Higgs particle the frontiers of particle physics beckon the imagination Exploring in detail the full history of particle physics Yuval Ne'eman and Yoram Kirsh explain in an engaging nonmathematical style the principles of modern theories such as quantum mechanics and Einstein's relativity and they brilliantly succeed in conveying to the reader the excitement that accompanied the original discoveries The book is spiced with amusing stories on how great discoveries were made and Ne'eman who took an active role in some of the historical advances in particle physics gives his personal point of view New to this edition are sections on the discovery of the top quark the rise and fall of the supercollider project the detection of the Z₀ particle in e⁺e⁻ colliders and the use of the width of the Z₀ to determine the number of generations of quarks and leptons The Particle Hunters will interest anyone who wants to keep pace with the progress of human knowledge Yuval Ne'eman discovered the basic symmetry of the subatomic particles of matter leading him to their classification to the prediction of new particles and to his identification in 1962 of a new layer in the structure of matter quarks Yoram Kirsh was awarded the Aharon Katzir Prize for popular science writing in 1975

Particle Hunters Yuval Ne'eman, Yoram Kirsh, 1986-06-12 In The Particle Hunters the authors give a non technical account of the fascinating story of the search for the fundamental building blocks of matter Beginning with the experiments of Thompson and Rutherford at the turn of the century the book chronicles how physicists revealed layer upon layer of structure within the atom and concludes with an up to date description of recent discoveries including the charmed beauty and truth quarks the psi and upsilon particles the tau lepton and the W and Z intermediate vector bosons the carriers of the weak force All that is required of the reader is a knowledge of a few basic concepts such as energy mass and electric charge This lucid and entertaining exposition of the search for the ultimate elementary particles co authored by a scientist who himself was responsible for many of the major steps forward in the field will interest anyone wishing to keep pace with the progress of human knowledge from the scientifically educated general reader through to the professional physicist

Neutrino Hunters Ray Jayawardhana, 2013-12-10 Neutrino Hunters paints a vivid portrait of this new astronomy for the twenty first century and the fascinating scientists who put it into place Marcia Bartusiak author of The Day We Found the Universe Winner of the Canadian Science Writers Association Science in Society Book Award One of the Best Physics Books of 2013 Cocktail Party Physics Blog Scientific American For more than eighty years adventurous minds from around the world have been chasing neutrinos incredibly small bits of matter that pass through our bodies every second by the trillions In Neutrino Hunters the renowned astrophysicist and award winning writer Ray Jayawardhana takes us on a thrilling journey into the shadowy world of neutrinos and the colorful lives of those who seek them Demystifying particle science along the way Jayawardhana tells a detective story with cosmic implications interweaving tales of the sharp witted theorist Wolfgang Pauli the troubled genius Ettore Majorana the harbinger of the atomic age Enrico

Fermi the notorious Cold War defector Bruno Pontecorvo and the dynamic dream team of Marie and Pierre Curie Then there are the scientists of today who have caught the neutrino bug and whose experimental investigations stretch from a working nickel mine in Ontario to a long tunnel through a mountain in central Italy from a nuclear waste site in New Mexico to a bay on the South China Sea and from Olympic size pools deep underground to a gigantic cube of Antarctic ice called naturally IceCube As Jayawardhana recounts a captivating saga of scientific discovery and celebrates a glorious human quest he reveals why the next decade of neutrino hunting will redefine how we think about physics cosmology and our lives on Earth

Introduction to Particle and Astroparticle Physics Alessandro De Angelis, Mário João Martins Pimenta, 2015-09-05
This book written by researchers who had been professionals in accelerator physics before becoming leaders of groups in astroparticle physics introduces both fields in a balanced and elementary way requiring only a basic knowledge of quantum mechanics on the part of the reader The new profile of scientists in fundamental physics ideally involves the merging of knowledge in astroparticle and particle physics but the duration of modern experiments is such that people cannot simultaneously be practitioners in both Introduction to Particle and Astroparticle Physics is designed to bridge the gap between the fields It can be used as a self training book a consultation book or a textbook providing a modern approach to particles and fundamental interactions

Matter Guido Tonelli, 2024-09-25 What are we made up of What holds material bodies together Is there a difference between terrestrial matter and celestial matter the matter that makes up the Earth and the matter that makes up the Sun and other stars When Democritus stated between the fifth and fourth centuries BCE that we are made up of atoms few people believed him Not until Galileo and Newton in the seventeenth century did people take the idea seriously and it was another four hundred years before we could reconstruct the elementary components of matter Everything around us the matter that forms rocks and planets flowers and stars even us has very particular properties These properties which seem quite normal to us are in fact very special because the universe whose evolution began almost fourteen billion years ago is today a very cold environment In this book Guido Tonelli explains how elementary particles which make up matter combine into bizarre shapes to form correlated quantum states primordial soups of quarks and gluons or massive neutron stars New questions that have emerged from the most recent research are answered in what sense is the vacuum a material state Why can space time also vibrate and oscillate Can elementary grains of space and time exist What forms does matter assume inside large black holes In clear and lively prose Tonelli takes readers on an exhilarating journey into the latest discoveries of contemporary science enabling them to see the universe and themselves in a new light

Particle Panic! Kristine Larsen, 2019-04-04 From novels and short stories to television and film popular media has made a cottage industry of predicting the end of the world will be caused by particle accelerators Rather than allay such fears public pronouncements by particle scientists themselves often unwittingly fan the flames of hysteria This book surveys media depictions of particle accelerator physics and the perceived dangers these experiments pose In addition it describes the role

of scientists in propagating such fears and misconceptions offering as a conclusion ways in which the scientific community could successfully allay such misplaced fears through more effective communication strategies The book is aimed at the general reader interested in separating fact from fiction in the field of high energy physics at science educators and communicators and last but not least at all scientists concerned about these issues About the Author Kristine M Larsen holds a Ph D in Physics and is currently a professor at Central Connecticut State University New Britain CT in the Geological Sciences Department She has published a number of books among them The Women Who Popularized Geology in the 19th Century Springer 2017 The Mythological Dimensions of Neil Gaiman eds Anthony Burdge Jessica Burke and Kristine Larsen Kitsune Press 2012 Recipient of the Gold Medal for Science Fiction Fantasy in the 2012 Florida Publishing Association Awards The Mythological Dimensions of Doctor Who eds Anthony Burdge Jessica Burke and Kristine Larsen Kitsune Press 2010 as well as Stephen Hawking A Biography Greenwood Press 2005 and Cosmology 101 Greenwood Press 2007
