Photonic Switching II Kunio Tada, H. Scott Hinton, 2012-12-06 The 1990 International Topical Meeting on Photonic Switching was held April 12-14 1990 in Kobe Japan in conjunction with the 1990 International Meeting on Optical Computing It was sponsored by the Institute of Electronics Information and Communication Engineers in cooperation with the IEEE Lasers and Electro Optics Society the Optical Society of America and the Japan Society of Applied Physics The attendance was in excess of 340 persons with 18 countries represented a testimony to the current international interest in photonic switching This book contains expanded and more detailed versions of most of the papers presented at the topical meeting With the success of optical fibers there is an increased demand for a switching system that can operate directly on the light present in the fibers The goal is to reduce the total number of optical to electrical and electrical to optical transformations as far as possible in addition to exploiting the large spectral and temporal bandwidth offered by such an optically transparent system

Coherent Optical Communications and Photonic Switching Giancarlo Prati,1990 Photonic switching is a term used to describe existing and new photonic devices in conjunction with existing and new electronic devices to realise new or improved switching and networking capabilities It includes simple mechanically activated optical switches used for network protection switching and network reconfiguration where an entire optical signal is redirected as a unit It includes the use of optical interconnections within equipment to facilitate internal high speed and high density interconnects It includes the use of tunable transmitters and receivers at the core of a high speed packet or circuit switch with large quantities of electronics providing supporting interface and control functions In principle it also includes the concept of an all optical switch whose architecture and component technologies have yet to be invented In recent years materials and device scientists have been coming together more and more with systems architects to uncover the real opportunity areas for coherent communications and photonic switching

Frontiers of Computing Systems Research Stuart K. Tewksbury,2012-12-06 Computing systems researchers confront two serious problems 1 The increasingly monolithic or pseudo monolithic integration of complex computing functions and systems imposes an environment which integrates advanced principles and techniques from a broad variety of fields Researchers not only must confront the increased complexity of topics in their specialty field but also must develop a deeper general understanding of a broadening number of fields 2 There has been a proliferation of journals books workshops and conferences through which research results are reported

Remaining familiar with recent advances in our specific fields is a major challenge. Casually browsing through journals and conference proceedings to remain aware of developments in areas outside our specialization has become an even greater challenge. Frontiers of Computing Systems Research has been established to address these two issues. With the assistance of an advisory board of experts from a wide variety of specialized areas we hope to provide roughly annual volumes of invited chapters on a broad range of topics and designed for an interdisciplinary research audience. No single volume can cover all the relevant topics and no single article can convey the full set of directions being pursued within a given topic. For this reason a chapter listing technical reports available from universities is also included. Often such unpublished reports are designed for a general research audience and provide a good informal look at trends in specialized research topics.
