Retargetable Compiler Technology For Embedded Systems:

Retargetable Compiler Technology for Embedded Systems Rainer Leupers,Peter Marwedel,2013-03-09 It is well known that embedded systems have to be implemented efficiently This requires that processors optimized for certain application domains are used in embedded systems Such an optimization requires a careful exploration of the design space including a detailed study of cost performance tradeoffs In order to avoid time consuming assembly language programming during design space exploration compilers are needed In order to analyze the effect of various software or hardware configurations on the performance retargetable compilers are needed that can generate code for numerous different potential hardware configurations This book provides a comprehensive and up to date overview of the fast developing area of retargetable compilers for embedded systems It describes a large set important tools as well as applications of retargetable compilers at different levels in the design flow Retargetable Compiler Technology for Embedded Systems is mostly self contained and requires only fundamental knowledge in software and compiler design It is intended to be a key reference for researchers and designers working on software compilers and processor optimization for embedded systems **Handbook of Computer Architecture** Anupam Chattopadhyay,2024-12-20 This handbook presents the key topics in the area of computer architecture covering from the basic to the most advanced topics including software and hardware design methodologies It will provide readers with the most comprehensive updated reference information covering applications in single core processors multicore processors application specific processors reconfigurable architectures emerging computing architectures processor design and programming flows test and verification This information benefits the readers as a full and quick technical reference with a high level review of computer architecture technology detailed technical descriptions and the latest practical applications **System-on-Chip** Bashir M. Al-Hashimi,2006-01-31 This book highlights both the key achievements of electronic systems design targeting SoC implementation style and the future challenges presented by the continuing scaling of CMOS technology Retargetable Compilers for Embedded Core Processors Clifford Liem,2013-03-09 Embedded core processors are becoming a vital part of today s system on a chip in the growing areas of telecommunications multimedia and consumer electronics This is mainly in response to a need to track evolving standards with the flexibility of embedded software Consequently maintaining the high product performance and low product cost requires a careful design of the processor tuned to the application domain With the increased presence of instruction set processors retargetable software compilation techniques are critical not only for improving engineering productivity but to allow designers to explore the architectural possibilities for the application domain Retargetable Compilers for Embedded Core Processors with a Foreword written by Ahmed Jerraya and Pierre Paulin overviews the techniques of modern retargetable compilers and shows the application of practical techniques to embedded instruction set processors The methods are highlighted with examples from industry processors used in products for multimedia telecommunications and consumer electronics An emphasis is

given to the methodology and experience gained in applying two different retargetable compiler approaches in industrial settings The book also discusses many pragmatic areas such as language support source code abstraction levels validation strategies and source level debugging In addition new compiler techniques are described which support address generation for DSP architecture trends The contribution is an address calculation transformation based on an architectural model Retargetable Compilers for Embedded Core Processors will be of interest to embedded system designers and programmers the developers of electronic design automation EDA tools for embedded systems and researchers in hardware software co design **Retargetable Code Generation for Digital Signal Processors** Rainer Leupers,2013-03-09 According to market analysts the market for consumer electronics will con tinue to grow at a rate higher than that of electronic systems in general The consumer market can be characterized by rapidly growing complexities of appli cations and a rather short market window As a result more and more complex designs have to be completed in shrinking time frames A key concept for coping with such stringent requirements is re use Since the re use of completely fixed large hardware blocks is limited to subproblems of system level applications for example MPEG 2 flexible programmable pro cessors are being used as building blocks for more and more designs Processors provide a unique combination offeatures they provide flexibility and re use The processors used in consumer electronics are however in many cases dif ferent from those that are used for screen and keyboard based equipment such as PCs For the consumer market in particular efficiency of the product plays a dominating role Hence processor architectures for these applications are usually highly optimized and tailored towards a certain application domain **IEEE Circuits & Devices** ,2002 **Proceedings of the … International Symposium on Hardware/Software Codesign** ,2002 **Proceedings of the 11th International Symposium on System Synthesis** ,1998 This is a collection of papers presented at the 11th International Symposium on System Synthesis It covers topics such as code generation optimization issues application specific synthesis techniques synchronization and interface issues instruction encoding and software synthesis techniques **EUROMICRO 99, Proceedings of the 25th EUROMICRO Conference** ,1999 Annotation This is a two volume set of the proceedings of the September 1999 conference on the current and future developments in informatics theories and application areas Volume I 80 contributions discusses digital system design architectures and methods and tools Volume II 30 contributions covers music technology and audio processing dependable computing systems software process and product improvement multimedia and telecommunication and network computing Lacks a subject index Annotation copyrighted by Book News Inc Portland OR *ACM SIGPLAN Notices* ,2006-07 Journal of VLSI Signal Processing Systems for Signal, Image, and Video Technology ,2007 **Code Generation for Embedded Processors** Peter Marwedel,Gert Goossens,1995-06-30 Recently new research efforts emerged on the edge between software compilation and hardware synthesis to develop high quality code generation tools for embedded processors Code Generation for Embedded Processors provides a survey of these new developments Although not limited to

these targets the main emphasis is on code generation for modern DSP processors **Embedded Systems Programming** ,1999-07 **Embedded Software** ,2006 **Languages, Compilers, and Tools for Embedded Systems** ,2000 APCCAS ... ,2002 **Application Specific Embedded Processor Customizations for Low Power and High Performance** Peter Petrov,2004 **The British National Bibliography** Arthur James Wells,2001 **Journal of Information Science and Engineering** ,1998 *SASIMI '98* ,1998
