**Algorithms** Robert Sedgewick, Kevin Wayne, 2011-02-21  
The leading introduction to computer algorithms in use today including fifty algorithms every programmer should know Princeton Computer Science professors Robert Sedgewick and Kevin Wayne survey the most important computer algorithms in use and of interest to anyone working in science mathematics and engineering and those who use computation in the liberal arts They provide a full treatment of data structures and algorithms for key areas that enable you to confidently implement debug and put them to work in any computational environment  
Fundamentals Basic programming models Data abstraction Bags queues and stacks Analysis of algorithms Sorting Elementary sorts Mergesort Quicksort Priority queues Applications Graphs Undirected graphs Directed graphs Minimum spanning trees Shortest paths Strings String sorts Tries Substring search Regular expressions Data compression These algorithms are generally ingenious creations that remarkably can each be expressed in just a dozen or two lines of code As a group they represent problem solving power of amazing scope They have enabled the construction of computational artifacts the solution of scientific problems and the development of commercial applications that would not have been feasible without them

*Algorithms in C++, Parts 1-4* Robert Sedgewick, 1998-07-13 Robert Sedgewick has thoroughly rewritten and substantially expanded and updated his popular work to provide current and comprehensive coverage of important algorithms and data structures Christopher Van Wyk and Sedgewick have developed new C implementations that both express the methods in a concise and direct manner and also provide programmers with the practical means to test them on real applications Many new algorithms are presented and the explanations of each algorithm are much more detailed than in previous editions A new text design and detailed innovative figures with accompanying commentary greatly enhance the presentation The third edition retains the successful blend of theory and practice that has made Sedgewick's work an invaluable resource for more than 250,000 programmers This particular book Parts 1-4 represents the essential first half of Sedgewick's complete work It provides extensive coverage of fundamental data structures and algorithms for sorting searching and related applications Although the substance of the book applies to programming in any language the implementations by Van Wyk and Sedgewick also exploit the natural match between C

classes and ADT implementations Highlights Expanded coverage of arrays linked lists strings trees and other basic data structures Greater emphasis on abstract data types ADTs modular programming object oriented programming and C classes than in previous editions Over 100 algorithms for sorting selection priority queue ADT implementations and symbol table ADT searching implementations New implementations of binomial queues multiway radix sorting randomized BSTs splay trees skip lists multiway tries B trees extendible hashing and much more Increased quantitative information about the algorithms giving you a basis for comparing them Over 1000 new exercises to help you learn the properties of algorithms Whether you are learning the algorithms for the first time or wish to have up to date reference material that incorporates new programming styles with classic and new algorithms you will find a wealth of useful information in this book
