New Architecture For The Underground:

New Architecture for the Underground David J. Taylor, 2001-06-01 **Below Ground Level** Ernst von Meijenfeldt, 2002-10-25 Any space that involves descending from our typical aboveground environment is a provocation to our sensory perceptions Such hidden spaces evoke latent mythical images and confront us with the clash between nature and artifice in our built environment This book explores the character use and design of underground space as a space of its own International examples of commercial premises restaurants sports facilities subway stations museums churches libraries concert halls houses and other building types form the core material Interviews with many renowned designers including Norman Foster Floris Alkemade OMA and Francine Houben Mecanoo convey the architects own views on the subject Essays reflect on the cultural aspects planning conditions design considerations technical requirements and sustainability aspects of building below ground level Chapters include Urban Development Architecture Functions Perception and Cognition Constructions Energy and Interior Climate

Underground Alessandra Cianchetta, Marc Armengaud, 2017-01-08 Under the surface of cities and within built environments lay hidden layers that for some play a key role in the urban scenario when others got lost in transformation During the 20th Century both theoretical works and technical innovations gave rise to several massive urban underground projects in New York London and Paris directly contributing to the definition of the new profession of urban planner This underground planning and development in major cities was influential to a discussion on whether the city's future was going to be above or underground Underground planning therefore corresponds to a key moment in modern urbanism and architecture both in the East and the West The dimensions of the infrastructure and large complex facilities that resulted from this time do not allow us to ignore them simply because they do not correspond to our sensibilities any more How do we learn how to develop projects in these underground built environments This book proposes to redeploy these substantial structures and their potential Looking at urban and architectural strategies from their basement stratifications up reveals a rich cultural background that is crucial to understanding of the metropolitan development in cities like London Paris New York Stockholm Toronto Istanbul Moscow Abu Dhabi Montreal and Houston Such a topic brings design and theory together in a renewed paradigm as massive underground transformations are about to take place for instance in the Paris metropolitan region at the occasion of the Grand Paris new subway network The questions set by the underground confront simultaneously several fields such as urbanism architecture public space infrastructure landscape night time cultures etc Illustrated by the innovative work of the award winning French Practice AWP this volume asks questions such as how should we rethink underground parking in respect to less car use and where should the dead be buried in the future With the need for densification in cities it proposes we need to review options below ground as well as the high rise options It also addresses issues of infrastructure transportation and 21st Century energy mining
