Real Time Theory In Practice:

Real-Time: Theory in Practice J.W.de Bakker,1992-06-24 In the past decade the formal theory of specification verfication and development of real time programs has grown from work of a few specialized groups to a real bandwagon Many eminent research groups have shifted their interests in this direction Consequently research in real time is now entering established research areas in formal methods such as process algebra temporal logic and model checking This volume contains the proceedings of a workshop dedicated to the theory of real time with the purpose of stepping back and viewing the results achieved as well as considering the directions of ongoing research The volume gives a representative picture of what is going on in the field worldwide presented by eminent active researchers The material in the volume was prepared by the authors after the workshop took place and reflects the results of the workshop discussions Application and Theory of Petri Nets 2002 Javier Esparza,Charles Lakos,2003-08-02 Computer Aided Verification Costas Courcoubetis,1993-06-16 This volume contains the proceedings of the Fifth Conference on Computer Aided Verfication held in Crete Greece in June July 1993 The objective of the CAV conferences is to bring together researchers and practitioners interested in the development anduse of methods tools and theories for the computer aided verification of concurrent systems The conferences provide an opportunity for comparing various verfication methods and tools that can be used to assist the applications designer Emphasis is placed on new research results and the application of existing methods to real verification problems The volume contains abstracts of three invited lectures and full versions of 37 contributed papers selected from 84 submissions The contributions are grouped into sections on hardware verification with BDDs methods and tools theorem proving analysis of real time systems process algebras and calculi partial orders and exploiting symmetry
