
A Handbook for Project Management Practitioners

RODNEY TURNER

Projects and project management are now widely recognized by organizations as being essential to achieving their strategic objectives. Achieving the strategic objectives often involves change, and that change needs managing in a different way than managing the routine work of the organization. The change can take several forms:

- It may be an engineering construct, a new building, new infrastructure or a new product or production machinery;
- It may be an information system, involving new information and communication technology (ICT);
- Or it may be a social construct, new processes, a new organization's structure or new skills in the work force.

In each case, the organization that wants the new asset creates a temporary organization, a project, to which resources are assigned to do the work to deliver that beneficial change. The change itself is some new facility or asset. We have just seen that the facility or asset may be an engineering construct, an ICT system or a social construct. Once the project is finished, that asset will be operated to deliver benefit to the owning organization. During its life, the temporary organization needs managing to deliver the asset and achieve the benefit on completion. The asset and desired benefit (the objectives) must be defined, as must the process of achieving the objectives, and the work and delivery of the objectives must be monitored and controlled. The management of the project (the temporary organization) is the responsibility of project management practitioners.

This book is intended as a handbook for project management practitioners. The aim is to give an introduction to and overview of the essential knowledge required for managing projects. Competence can be defined as the knowledge, skills and traits required to deliver desired results (Crawford, 2003). Through this book I introduce the reader to the knowledge required to manage projects. Competence the individual will develop through their experience, and through their essential traits they bring to the job. The project management professional societies throughout the world take several different approaches to defining the competence required to manage projects.
