**Wind Energy Basics** Paul Gipe,2009-05-05 The availability of clean renewable power is without question going to be the defining challenge and goal of the 21st century and wind will lead the way Internationally acclaimed wind energy expert Paul Gipe is as soberly critical of past energy mistakes as he is convincingly optimistic about the future The overwhelming challenge of

transforming our world from one of fossil carbon to one of clean power seems daunting at best and paralyzingly impractical at worst Wind Energy Basics offers a solution Wind power can realistically not only replace the lion's share of oil coal and natural gas fired electrical plants in the U S but also can add enough extra power capacity to allow for most of the cars in the nation to run on electricity Gipe explains why such a startlingly straightforward solution is eminently doable and can be accomplished much sooner than previously thought and will have the capacity to resuscitate small and regional economies Wind Energy Basics offers a how to for home based wind applications with advice on which wind turbines to choose and which to avoid He guides wind energy installers through considerations such as renewable investment strategies and gives cautionary tales of wind applications gone wrong And for the activist he suggests methods of prodding federal state and provincial governments to promote energy independence

Energy, Power and Protest on the Urban Grid Andres Luque-Ayala, Jonathan Silver, 2016-04-28 Providing a global overview of experiments around the transformation of cities electricity networks and the social struggles associated with this change this book explores the centrality of electricity infrastructures in the urban configuration of social control segregation integration resource access and poverty alleviation Through multiple accounts from a range of global cities this edited collection establishes an agenda that recognises the uneven and often historical geographies of urban electricity networks prompting attempts to re wire the infrastructure configurations of cities and predicating protest and resistance from residents and social movements alike Through a robust theoretical engagement with established work around the politics of urban infrastructures the book frames the transformation of electricity systems in the context of power and resistance across urban life drawing links between environmental and social forms of sustainability Such an agenda can provide both insight and inspiration in seeking to build fairer and more sustainable urban futures that bring electricity infrastructures to the fore of academic and policy attention

Douthwaite, 2003 The world is using oil at four times the rate it is finding it and the output of many existing fields including the North Sea is beginning to decline According to one contributor to this book global oil production will start falling within the next five to ten years and increases in natural gas output will cease to be capable of making up the shortfall after about 2015 This groundbreaking book explores these and many other issues and its authors conclude that renewables do indeed have the capacity to provide
