Prognostic Factors In Cancer:

Prognostic Factors in Cancer Mary K. Gospodarowicz, 2001-04-16 *Prognostic Factors in Cancer* Second Edition updates the first authoritative monograph on prognostic factors and their use in planning treatment for cancer patients. The text is an extension of the work of the International Union Against Cancer (UICC) on the TNM Classification of Malignant Tumours and their current focus on prognostic factors in cancer. The TNM classification is the most widely used system for staging the progression of cancer. The anatomic extent of disease represented by the TNM system is the single most important predictor for outcomes of most tumors. *Prognostic Factors in Cancer* Second Edition is divided into two parts. The first section examines prognosis in general and more specifically prognosis in cancer patients, including issues surrounding accuracy of measurement of prognosis, the methodology of studying and classifying prognostic factors, and the application of prognostic factors in clinical decision making in the treatment of cancer. The second section provides chapters on site specific or tumor specific neoplasms and the prognostic factors associated with them. These chapters contain an overview of the relevant literature and include summaries that classify prognostic factors according to subject and relevance. *Prognostic Factors in Cancer* Second Edition illustrates the scope of the field as it stands today and will provide perspective on likely outcomes of neoplastic disease for all physicians and others responsible for the care of patients with cancer.

Prognostic Factors in Cancer Mary K. Gospodarowicz, Brian O'Sullivan, Leslie H. Sobin, 2006 *Prognostic Factors in Cancer* Third Edition examines the prognostic factors associated with each cancer site and provides insight into potential treatments and therapies. The text is an extension of the International Union Against Cancer's UICC seminal work, the TNM Classification of Malignant Tumours, and integrates the current focus on prognostics in cancer. This Third Edition reflects the advances in cancer diagnosis and treatment planning made in recent years. The first part of the book offers a complete update on the science of cancer prognosis, while the second part contains site specific chapters that provide evidence based guidelines for treatment. Each clinical chapter summarizes the significance of the great variety of tumour related, patient related, and environment related factors that play a role in the prognosis of cancer, all backed with a grid for quick reference. Visit TNM Online at www.mrw.interscience.wiley.com/tnm to find the complete text of the previous edition of *Prognostic Factors in Cancer* as well as other supplemental material related to cancer staging and predictive indicators. *Prognostic Factors in Cancer* Third Edition is an invaluable resource for all oncologists and cancer researchers. The title is also of interest for other professionals such as pathologists and epidemiologists.

Prognostic Factors in Cancer Paul Hermanek, Mary K. Gospodarowicz, Donald E. Henson, Robert V.P. Hutter, Leslie H. Sobin, 2012-12-06 M K Gospodarowicz, P Hermanek and D E Henson. Attention to innovations in cancer treatment has tended to eclipse the importance of prognostic assessment. However, the recognition that prognostic factors often have a greater impact on outcome than available therapies, and the proliferation of biochemical, molecular, and genetic markers, have resulted in renewed interest in this field. The outcome in patients with cancer is

determined by a combination of numerous factors Presently the most widely recognized are the extent of disease histologic type of tumor and treatment It has been known for some time that additional factors also influence outcome These include histologic grade lymphatic or vascular invasion mitotic index performance status symptoms and most recently genetic and biochemical markers It is the aim of this volume to compile those prognostic factors that have emerged as important determinants of outcome for tumors at various sites This compilation represents the first phase of a more extensive process to integrate all prognostic factors in cancer to further enhance the prediction of outcome following treatment Certain issues surrounding the assessment and reporting of prognostic factors are also considered

Importance of Prognostic Factors
Prognostic factors in cancer often have an immense influence on outcome while treatment often has a much weaker effect For example the influence of the presence of lymph node involvement on survival of patients with metastatic breast cancer is much greater than the effect of adjuvant treatment with tamoxifen in the same group of patients 5
