The Development of Language Processing Strategies Reiko Mazuka, 2014-05-12 Ever since the notion of explanatory adequacy was promoted by Chomsky in his 1965 Aspects linguists and psycholinguists have been in pursuit of a psychologically valid theory of grammar To be explanatorily adequate a theory of grammar can not only describe the general characteristics of a language but can also account for the underlying psychological processes of acquiring and processing that language To be considered psychologically valid a grammar must be learnable by ordinary children the problem of acquisition and must generate sentences that are parsable by ordinary people the problem of processing Ultimately the fields of language acquisition and processing are concerned with the same goal to build a theory that accounts for grammar as it is acquired by children accessed in comprehension and production of speech and represented within the human mind Unfortunately these two fields developed independently and have rarely been well informed about each other's concerns Both have experienced past difficulties as a result Recently new models have been developed with full consideration to cross linguistic diversity Gone are many of the basic assumptions of conventional models and in their place a variety of innovative and more flexible assumptions have emerged However in their attempt to address cross linguistic issues these processing models have yet to fully address the developmental challenge How can a child without a stable grammar process language and still manage to acquire new grammar This book attempts to develop a model of language processing that addresses both cross linguistic and developmental challenges It proposes to link the setting of a basic configurational parameter during language acquisition to
