Product Design For Modularity:

Product Design for Modularity Ali K. Kamrani, Sa'ed M. Salhieh, 2002-05-31 Kamrani University of Michigan and Salhieh University of Amman propose a modular approach to the design of complex products using similar components that facilitates a quicker response to changing market demands The approach focuses on decomposing the overall design problem into functionally independent elements among which interactions are minimized The second edition moves the case study of a four gear speed reducer into its own chapter Annotation copyrighted by Book News Inc Portland OR

Product Design for Modularity Ali K. Kamrani, Sa'ed M. Salhieh, 2014-01-15 *Controlling Design Variants* Anna Ericsson, Gunnar Erixon, 1999 Introduces the concept of modular design within the product platform approach intended to increase company efficiency while reducing costs and time to market Companies can achieve significant advantages by separating parts that should vary to satisfy customer needs from parts that should be kept as common units The terminology and a five step method for creating modular product platforms are developed Back cover

Life-cycle Modularity in Product Design Jagannath P. Gurumurthy,1998 **Interdisciplinary Optimization of Modularization** Marvin Caspar,2021-12-08 Research Paper postgraduate from the year 2021 in the subject Computer Science Commercial Information Technology grade 1 0 University of Kaiserslautern Fraunhofer IESE language English abstract In this research project modularization will be investigated in the field of different engineering disciplines and in its interdisciplinary impact Various experts are interviewed to reconcile academic research and modularization in practice as part of this research project On the one hand different strategies and tools are presented and on the other hand metrics for the optimization of modular architectures are shown This research project aims at the comparison of different modularization approaches and the discussion of interdisciplinary modularization supported by views from several experts The challenges of customizing production meeting shorter innovation cycles anticipating volatility in demand patterns that are difficult to predict and selling products at competitive production costs in different local markets are forcing companies to adopt innovative production concepts Modularization is an essential way to reduce internal complexity and costs and represents a central strategy for today s companies by dividing a whole into parts called modules The increasing diversity in production and the growing influence and interconnectedness of different engineering disciplines within the product architecture make modularization a multidimensional optimization problem Numerous different strategies and tools come into the picture during the formation of modular product structures **Limits to Modularity** Dieter Ernst,2004 *Modularity and Complexity* Delvon B. When should an Original Equipment Manufacturer (OEM) remanufacture? Julia Bernhard,2015-11-11 Master s Thesis from the year 2015 in the subject Business economics Supply Production Logistics grade 7 5 Erasmus University Rotterdam Rotterdam School of Management course Supply Chain Management language English abstract An increasing rate of return raw material prices and carbon emissions urge companies to look for sustainable solutions The value of returned products can be recaptured through closed loop supply chain activities and in particular through reconditioning of which remanufacturing is one option that retains a high value The definition must be clear however as the term is not yet common This recovery type ensures that a restored product fulfils an equivalent or even

superior function than the original product Furthermore it receives the same warranty as a new product and secures profits while minimizing the environmental impact When a company decides whether remanufacturing is a viable option several factors have to be considered Therefore the aim of this thesis was to provide guidance for the remanufacturing decision while bridging the gap between research and practice An extensive literature review provided general remanufacturing benefits and issues as well as a selection of the most important influencing characteristics Subsequently hypotheses were formulated per characteristic category which were product internal and external and tested via surveys and statistically The analysis yielded that a product should be highly modular have a long product life cycle and a residual value The internal processes require sufficient return quantities as a starting point low processing costs compared to the original production and the processing time has to be weighed against other benefits In addition a market demand has to be established and the cannibalization effect should be taken into account Finally a positive perception of remanufactured products and sufficient market channels to commercialize them are favourable for remanufacturing Using the survey means of the influencing characteristics a ranking was created irrespective of the signs but with regard to the strength The top five are processing costs residual value customer perception product life cycle and processing time These rankings are slightly different depending on the industry Lastly interviews with experts further supplemented the analysis and a managerial framework was created to provide guidance for the remanufacturing decision process
