Zdenek Svestka, John W. Harvey

Power Of Maps:

The Power of Maps Denis Wood, John Fels, 1992-01-01 This volume ventures into terrain where even the most sophisticated map fails to lead through the mapmaker's bias Denis Wood shows how maps are not impartial reference objects but rather instruments of communication persuasion and power Like paintings they express a point of view By connecting us to a reality that could not exist in the absence of maps a world of property lines and voting rights taxation districts and enterprise zones they embody and project the interests of their creators Sampling the scope of maps available today illustrations include Peter Gould's AIDS map Tom Van Sant's map of the earth U S Geological Survey maps and a child's drawing of the world THE POWER OF MAPS was published in conjunction with an exhibition at the Cooper Hewitt Museum the Smithsonian Institution's National Museum of Design *Rethinking the Power of Maps* Denis Wood, 2010-04-16 A contemporary follow up to the groundbreaking Power of Maps this book takes a fresh look at what maps do whose interests they serve and how they can be used in surprising creative and radical ways Denis Wood describes how cartography facilitated the rise of the modern state and how maps continue to embody and project the interests of their creators He demystifies the hidden assumptions of mapmaking and explores the promises and limitations of diverse counter mapping practices today Thought provoking illustrations include U S Geological Survey maps electoral and transportation maps and numerous examples of critical cartography participatory GIS and map art

The Power of Maps Denis Wood, John Fels, 1993 This text re-examines the maps we have known all our lives to reconsider what and how they tell us about the places we know and the places we learn about The pretence of objective scientific map making is demolished as the author explores how maps can change the way we see our world

The Algebra of Secondary Cohomology Operations Hans-Joachim Baues, 2006-06-12 The algebra of primary cohomology operations computed by the well known Steenrod algebra is one of the most powerful tools of algebraic topology This book computes the algebra of secondary cohomology operations which

enriches the structure of the Steenrod algebra in a new and unexpected way The book solves a long standing problem on the algebra of secondary cohomology operations by developing a new algebraic theory of such operations The results have strong impact on the Adams spectral sequence and hence on the computation of homotopy groups of spheres

Mutational and Morphological Analysis Jean-Pierre Aubin,1998-12-01 The analysis processing evolution optimization and or regulation and control of shapes and images appear naturally in engineering shape optimization image processing visual control numerical analysis interval analysis physics front propagation biological morphogenesis population dynamics migrations and dynamic economic theory These problems are currently studied with tools forged out of differential geometry and functional analysis thus requiring shapes and images to be smooth However shapes and images are basically sets most often not smooth J P Aubin thus constructs another vision where shapes and images are just any compact set Hence their evolution which requires a kind of differential calculus must be studied in the metric space of compact subsets Despite the loss of linearity one can transfer most of the basic results of differential calculus and differential equations in vector spaces to mutational calculus and mutational equations in any mutational space including naturally the space of nonempty compact subsets Mutational and Morphological Analysis offers a structure that embraces and integrates the various approaches including shape optimization and mathematical morphology Scientists and graduate students will find here other powerful mathematical tools for studying problems dealing with shapes and images arising in so many fields
