Optics Waves Atoms Nuclei An Introduction:

Optics, Waves, Atoms, and Nuclei Edwin L. Goldwasser, 1965 Problems after each chapter **Laser Control of Atoms and Molecules** Vladilen Letokhov, 2007-02-15 Rather different problems can be lumped together under the general term laser control of atoms and molecules They include the laser selection of atomic and molecular velocities for the purpose of Doppler free spectroscopy laser control of the position and velocity of atoms i e laser trapping and cooling of atoms and laser control of atomic and molecular processes ionization dissociation with a view of detecting single atoms and molecules and particularly separating isotopes and nuclear isomers Over the last decades the principal problems posed have been successfully solved and many of them have evolved remarkably in the subsequent investigations of the international research community For example the solution of the problem of laser cooling and trapping of atoms has given birth to the new field of the physics of ultracold matter i e quantum atomic and molecular gases The laser non coherent control of uni molecular processes has found an interesting extension in the field of laser coherent control of molecules The concept of laser control of position has been successfully demonstrated with microparticles optical tweezers concurrently with investigations into atomic control The laser photo ionization of molecules on surfaces has led to the development of novel techniques of laser assisted mass spectrometry of macromolecules and so on The aim of this book is to review these topics from a unified or coherent point of view It will be useful for many readers in various fields of laser science and its applications **Science Books**, 1967 **Atom Optics with Laser Light** S. Letokhov, 2020-04-23 This book deals specifically with the manipulation of atoms by laser light describing the focusing channeling and reflection of atoms by laser fields It also describes the potential fields required to cause the phase change of the wave function necessary for the atomic interactions to occur

Scattering, Two-Volume Set E. R. Pike, Pierre C. Sabatier, 2001-10-09

Scattering is the collision of two objects that results in a change of trajectory and energy For example in particle physics such as electrons photons or neutrons are scattered off of a target specimen resulting in a different energy and direction In the field of electromagnetism scattering is the random diffusion of electromagnetic radiation from air masses is an aid in the long range sending of radio signals over geographic obstacles such as mountains This type of scattering applied to the field of acoustics is the spreading of sound in many directions due to irregularities in the transmission medium Volume I of Scattering will be devoted to basic theoretical ideas approximation methods numerical techniques and mathematical modeling Volume II will be concerned with basic experimental techniques technological practices and comparisons with relevant theoretical work including seismology medical applications meteorological phenomena and astronomy This reference will be used by researchers and graduate students in physics applied physics biophysics chemical physics medical physics acoustics geosciences optics mathematics and engineering This is the first encyclopedic range work on the topic of scattering theory in quantum mechanics elastodynamics acoustics and electromagnetics It serves as a comprehensive interdisciplinary presentation of scattering and inverse scattering theory and applications in a wide range of scientific fields with an emphasis and details up to date

developments Scattering also places an emphasis on the problems that are still in active current research The first interdisciplinary reference source on scattering to gather all world expertise in this technique Covers the major aspects of scattering in a common language helping to widening the knowledge of researchers across disciplines The list of editors associate editors and contributors reads like an international Who s Who in the interdisciplinary field of scattering
