Problem Solving and Programs with C Christine Ezeife, 2003-08-01. Appropriate for a first-year programming course using C programming language. *Problem Solving and Programs with C* places emphasis on problem-solving skills and methods, discussing all important C programming language concepts. The text teaches ways to define and discover problems representing a real-world situation, how to understand a given problem by identifying its set of input and output data, how to define transformations, algorithms, flowcharts, and programs needed to produce problem output from its set of input data, how to define alternative solutions to a problem, and how to evaluate and test problem solutions for accuracy. Emphasis is placed on the use of a top-down design approach to problem solving, which incorporates problem-solving tools like structure charts, algorithms, and flowcharts. The program logic structures sequential function calls, decision, and repetition, and advanced data structures: arrays, files, binary trees, hashing, and linked lists, etc. are discussed.
