Programming Languages And Systems In Computational Economics:

Programming Languages and Systems in Computational Economics and Finance Soren Bo Nielsen, 2012-12-06 The developments within the computationally and numerically oriented areas of Operations Research Finance Statistics and Economics have been significant over the past few decades Each area has been developing its own computer systems and languages that suit its needs but there is relatively little cross fertilization among them yet This volume contains a collection of papers that each highlights a particular system language model or paradigm from one of the computational disciplines aimed at researchers and practitioners from the other fields The 15 papers cover a number of relevant topics Models and Modelling in Operations Research and Economics novel High level and Object Oriented approaches to programming through advanced uses of Maple and MATLAB and applications and solution of Differential Equations in Finance It is hoped that the material in this volume will whet the reader's appetite for discovering and exploring new approaches to old problems and in the longer run facilitate cross fertilization among the fields We would like to thank the contributing authors the reviewers the publisher and last but not least Jesper Saxtorph Anders Nielsen and Thomas Stidsen for invaluable technical assistance

Handbook of Computational Economics Leigh Tesfatsion, Kenneth L. Judd, 2006-05-15 The explosive growth in computational power over the past several decades offers new tools and opportunities for economists This handbook volume surveys recent research on Agent based Computational Economics ACE the computational study of economic processes modeled as dynamic systems of interacting agents Empirical referents for agents in ACE models can range from individuals or social groups with learning capabilities to physical world features with no cognitive function Topics covered include learning empirical validation network economics social dynamics financial markets innovation and technological change organizations market design automated markets and trading agents political economy social ecological systems computational laboratory development and general methodological issues Every volume contains contributions from leading researchers Each Handbook presents an accurate self contained survey of a particular topic The series provides comprehensive and accessible surveys

Quantitative Economic Policy Reinhard Neck, Christian Richter, Peter Mooslechner, 2008-03-04 Econometric techniques and models are still being extensively used in the business of forecasting and policy advice This book presents recent advances in the theory and applications of quantitative economic policy with particular emphasis on fiscal and monetary policies in a European and global context The volume honors Andrew Hughes Hallett a pioneer and major scientist in quantitative economic policy analysis whose contributors are among his friends and former students

Handbook of Parallel Computing and Statistics Erricos John Kontoghiorghes, 2005-12-21 Technological improvements continue to push back the frontier of processor speed in modern computers Unfortunately the computational intensity demanded by modern research problems grows even faster Parallel computing has emerged as the most successful bridge to this computational gap and many popular solutions have emerged based on its concepts **The**

Rational Expectation Hypothesis, Time-Varying Parameters and Adaptive Control Marco P. Tucci, 2012-12-06 One of the major controversies in macroeconomics over the last 30 years has been that on the effectiveness of stabilization policies. However, this debate between those who believe that this kind of policies is useless if not harmful and those who argue in favor of it has been mainly theoretical so far. The Rational Expectation Hypothesis, Time Varying Parameters and Adaptive Control wants to represent a step toward the construction of a common ground on which to empirically compare the two beliefs and to do this three strands of literature are brought together. The first strand is the research on time varying parameters (TVP), the second strand is the work on adaptive control and the third one is the literature on linear stationary models with rational expectations (RE). The material presented in The Rational Expectation Hypothesis, Time Varying Parameters and Adaptive Control is divided into two parts. Part 1 combines the strand of literature on adaptive control with that on TVP. It generalizes the approach pioneered by Tse and Bar Shalom (1973) and Kendrick (1981) and one recently used in Amman and Kendrick (2002) where the law of motion of the TVP and the hyperstructural parameters are assumed known to the case where the hyperstructural parameters are assumed unknown. Part 2 is devoted to the linear single equation stationary RE model estimated with the error in variables (EV) method. It presents a new formulation of this problem based on the use of TVP in an EV model. This new formulation opens the door to a very promising development. All the theory developed in the first part to control a model with TVP can *simpliciter* be applied to control a model with RE.

Microeconomic Theory and Computation Michael R. Hammock, J. Wilson Mixon, 2013-11-30 Economists can use computer algebra systems to manipulate symbolic models, derive numerical computations, and analyze empirical relationships among variables. Maxima is an open source multi platform computer algebra system that rivals proprietary software. Maxima's symbolic and computational capabilities enable economists and financial analysts to develop a deeper understanding of models by allowing them to explore the implications of differences in parameter values, providing numerical solutions to problems that would be otherwise intractable, and by providing graphical representations that can guide analysis. This book provides a step by step tutorial for using this program to examine the economic relationships that form the core of microeconomics in a way that complements traditional modeling techniques. Readers learn how to phrase the relevant analysis and how symbolic expressions, numerical computations, and graphical representations can be used to learn from microeconomic models. In particular, comparative statics analysis is facilitated. Little has been published on Maxima and its applications in economics and finance and this volume will appeal to advanced undergraduates, graduate level students, studying microeconomics, academic researchers in economics and finance, economists and financial analysts. Palgrave Handbook of Econometrics Terence C. Mills, Kerry Patterson, 2009-06-25 Palgrave Handbooks of Econometrics comprises landmark essays by the world's leading scholars and provides authoritative guidance in key areas of econometrics. With definitive contributions on the subject, the Handbook is an essential source for reference for professional econometricians.

economists researchers and students Following the successful Palgrave Handbook of Econometrics Volume 1 this second volume brings together leading academics working in econometrics today and explores applied econometrics Volume 2 contains contributions on subjects including growth development econometrics computing microeconomics macroeconomics finance spatial and urban economics and international economics

Fuzzy Systems and Data Mining III Antonio J. Tallón-Ballesteros, Kaicheng Li, 2017-11-15 Data science is proving to be one of the major trends of the second decade of the 21st century Even though the term was coined by Peter Naur in the mid 1960s as datalogy or the science of data it is in the context of data analytics and especially of big data that data science has emerged as the new paradigm Fuzzy and Crisp strategies are two of the most widespread approaches within the computational intelligence umbrella This book presents 65 papers from the 3rd International Conference on Fuzzy Systems and Data Mining FSDM 2017 held in Hualien Taiwan in November 2017 All papers were carefully reviewed by program committee members who took into consideration the breadth and depth of the research topics that fall within the scope of FSDM Offering a state of the art overview of fuzzy systems and data mining the publication will be of interest to all those whose work involves data science

Multi-Agent Applications with Evolutionary Computation and Biologically Inspired Technologies: Intelligent Techniques for Ubiquity and Optimization Chen, Shu-Heng, Kambayashi, Yasushi, Sato, Hiroshi, 2010-07-31 This book compiles numerous ongoing projects and research efforts in the design of agents in light of recent development in neurocognitive science and quantum physics providing readers with interdisciplinary applications of multi agents systems ranging from economics to engineering Provided by publisher

Fundamentals of Scientific Computing Bertil Gustafsson, 2011-06-11 The book of nature is written in the language of mathematics Galileo Galilei How is it possible to predict weather patterns for tomorrow with access solely to today's weather data And how is it possible to predict the aerodynamic behavior of an aircraft that has yet to be built The answer is computer simulations based on mathematical models sets of equations that describe the underlying physical properties However these equations are usually much too complicated to solve either by the smartest mathematician or the largest supercomputer This problem is overcome by constructing an approximation a numerical model with a simpler structure can be translated into a program that tells the computer how to carry out the simulation This book conveys the fundamentals of mathematical models numerical methods and algorithms Opening with a tutorial on mathematical models and analysis it proceeds to introduce the most important classes of numerical methods with finite element finite difference and spectral methods as central tools The concluding section describes applications in physics and engineering including wave propagation heat conduction and fluid dynamics Also covered are the principles of computers and programming including MATLAB
