Keller,Louis W. Pauly,Simon Reich,2021-01-12 Critics and defenders of multinational corporations often agree on at least one thing that the activities of multinationals are creating an overwhelmingly powerful global market that is quickly rendering national borders obsolete The authors of this book however argue that such expectations commonly rest on a myth They examine key activities of multinational corporations in the United States Japan and Europe and explore the relationship between corporate behavior and national institutions and cultures They demonstrate that the world s leading multinationals continue to be shaped decisively by the policies and values of their home countries and that their core operations are not converging to create a seamless global market With a wealth of fresh evidence the authors show that Japanese and German multinationals in particular remain only weakly committed to laissez faire policy orientations and continue to exhibit strong allegiance to national goals in such areas as investment and employment They also bring to light the consequences of enduring differences in government policies on for example industrial cartels capital markets and research and development The authors agree

that the world economy is becoming more complex and integrated as overt barriers to trade and investment fall away But they conclude that the extent of this integration is decisively limited by structural divergence at the level of the firm The book will be essential reading for those seeking to understand the growing interdependence of still distinctive industrial societies and the wellsprings of the true global economy *Harnessing Science and Technology for America's Economic Future* National Research Council,Policy and Global Affairs,Office of Special Projects Policy Division,National Forum on Science and Technology Goals,Committee on Harnessing Science and Technology for America's Economic Future,1999-08-09 This book is largely based on a 1998 forum where participants from across America discussed ways to improve the utilization of science and technology for economic growth over the next several decades A steering committee of prominent Americans co chaired by SEMATECH Chairman William Spencer and former Pennsylvania Governor and U S Attorney General Dick Thornburgh developed consensus recommendations from the forum input *Harnessing Science and Technology for America's Economic Future* puts forward long term goals for the nation and associated action items It includes background papers and talks from the forum covers the economics of science and technology based growth industry trends the role of government education research universities and the international context *Science, Technology, and Society* David D.
