Science & Public Policy ,2009 □□□□□□ ,2002 **Curriculum Theory, Practice and Active Learning in Changing Societies** Toomas Tenno,2002 Rethinking Science, Technology, and Social Change Ralph Schroeder,2007

Rethinking Science Technology and Social Change challenges the prevailing notion that science and technology are constructed or socially shaped. The text puts forth a case for technological determinism based on a realistic and pragmatic account of science and technology informed by historical comparisons. Schroeder begins by exploring the social organization of scientific and technological advances, the intersecting trajectories of big science and technological systems, and the impact of science and technology on economic change. He goes on to discuss the social implications of technology, including the way that it affects politics and consumption. The book then rethinks traditional theories about the relationship between science, technology, and social change. The argument presented shifts the debate on topics such as the relationship between growth and sustainability, and thus has important policy implications. This book will be of great interest to scholars, scientists, and anyone interested in understanding how science and technology are transforming our world.

Discourses of Violence--violence of Discourses Dirk Wiemann, 2005. The issues of violence and its control, containment, or overcoming range prominently in the social sciences. Empirical sociology seeks to derive generalizable explanations from its research into concrete cases of the occurrence or absence of violent conflict, aspiring to transform such explanations into instructions for strategic action. Within cultural studies, discursive and epistemic formations are assumed to be fundamentally and endemically violent. In these perspectives, the quotidian violence that ineluctably inheres in modern discourses manifests itself as e.g. normalisation, privilege, and exclusion, thus sharing a wide range of common objects and objectives with the social sciences. The essays collected in this volume address contemporary conjunctures and discourses of violence in world society from different disciplines, ranging from cultural studies, social science, political science, and philosophy to history, literary criticism, and psychology.

Information Society and Development Antony Palackal, Wesley Shrum, 2007. The digital revolution, a key feature of globalization, has extended the frontiers of the globe with a profound impact on how the world functions and interacts. Access to information and knowledge, facilitated by information and communication technologies (ICTs), has increasingly impacted patterns of learning, cultural expression, and social participation, and has provided opportunities for development. Paradoxically, the information and communication society today is characterized by imbalances and inequalities, christened as the digital divide. There is a growing concern the world over about the world's technological haves and have-nots. At the epicenter of this alarm is the expanding chasm between those with and without access to the ICT revolution. In the backdrop of the World Summit on Information Society held in Tunisia in November 2005, this volume explores the nature and effects of information and communication technologies with particular emphasis on
