

MOON PHASES

The moon orbits the Earth in a path called an orbit. It takes about 29.5 days to complete one orbit around the Earth.

During a lunar eclipse, the Earth passes between the Sun and the Moon, casting a shadow on the Moon.

The moon's phases are caused by the changing angle of the Sun, Earth, and Moon. As the Moon orbits the Earth, the portion of the Moon that is illuminated by the Sun and visible from Earth changes.

The moon does not produce its own light. It reflects light from the Sun towards the Earth.

As the moon orbits the Earth, the Sun, Earth, and Moon form different parts of the moon's orbit, creating the phases.
