

# Electronic Data Processing

**Electronic Data Processing (EDP)** can refer to the use of automated methods to process commercial data. Typically, this uses relatively simple, repetitive activities to process large volumes of similar information.

For example: stock updates applied to an inventory, banking transactions applied to account and customer master files, booking and ticketing transactions to an airline's reservation system, billing for utility services.

# Perspectives On Electronic Data Processing

**Richard Baskerville, Jan Stage, Janice I.  
DeGross**

## **Perspectives On Electronic Data Processing:**

**Perspectives on Electronic Data Processing** James D. J. Holmes,1972      **Use of Electronic Data Processing Equipment** United States. Congress. House. Committee on Post Office and Civil Service. Subcommittee on Census and Statistics,1963      *Use of Electronic Data Processing Equipment. Hearings..88-1* United States,1963

**Computer-generated perspective plots for highway design evaluation** ,1971      **Organizational and Social Perspectives on Information Technology** Richard Baskerville,Jan Stage,Janice I. DeGross,2013-03-14 The articles in this book constitute the proceedings papers from the IFIP WG 8 2 Working Conference IS2000 The Social and Organizational Perspective on Research and Practice in Information Technology held June 1 0 12 2000 in Aalborg Denmark The focus of the conference and therefore this book is on the basic aim of the working group namely the investigation of the interrelationships among four major components information systems IS information technology IT organizations and society This basic social and organizational perspective on research and practice in information technology may have evolved substantially since the founding ofthe group for example increasing the emphasis on IS development The plan for the conference was partially rooted in the early WG 8 2 traditions in which working conferences were substantially composed of invited papers For IS2000 roughly half of the paper presentations were planned to be invited the remaining half were planned to be double blind refereed in response to a Call For Papers Invited papers were single blind reviewed in order to provide the authors with pre publication feedback and comments along with the opportunity to revise their papers prior to its final incorporation in this book      **Youth Unemployment, an International Perspective** Constance Sorrentino,1981      Computer

**Operational Research in the Design of Electronic Data Processing Systems: Proceedings of a NATO Conference in Munich, 1971** Fred Hanssmann,1973 Conference report on operational research in the design of EDP systems covers programme planning methods and management information systems the minimization of costs simulation system performance prediction the design of real time systems the design of telecommunications systems and computer networks cost effectiveness analysis in hardware design etc Diagrams flow charts and references Conference held in munich 1971      Technology-rich Learning Environments: A Future Perspective Myint Swe Khine,Darrell Fisher,2003-08-27 The proliferation of information and communication technology tools in recent years has led many educators to revise the way they teach and structure their learning environments The growth of technology applications in teaching and training is not

only gaining momentum it is becoming a significant part of today's educational scene. This book presents research and case studies to explain how these technology-rich learning environments can be structured and positive results can be achieved. The authors, based on their extensive research data, present the pedagogical and organizational implications of technology-rich learning environments and more importantly they provide practical models, ideas, and exemplars for educators to actualize the full potential of technology in the future.

*Computers and Data Processing Today with Pascal* Steven L. Mandell, 1986  
**Stream Data Processing: A Quality of Service Perspective** Sharma Chakravarthy, Qingchun Jiang, 2009-04-09  
In recent years a new class of applications has come to the forefront primarily due to the advancement in our ability to collect data from multitudes of devices and process them efficiently. These include homeland security applications, sensor pervasive computing applications, various kinds of monitoring applications, and even traditional applications belonging to financial, computer network management, and telecommunication domains. These applications need to process data continuously and as long as data is available from one or more sources. The sequence of data items continuously generated by sources is termed a data stream. Because of the possible never-ending nature of a data stream, the amount of data to be processed is likely to be unbounded. In addition, timely detection of interesting changes or patterns or aggregations over incoming data is critical for many of these applications. Furthermore, the data arrival rates may fluctuate over a period of time and may be bursty at times. For most of these applications, Quality of Service or QoS requirements such as response time, memory usage, and throughput are extremely important. These application requirements make it infeasible to simply load the incoming data streams into a persistent store and process them effectively using currently available database management techniques.
