Sediments And Environmental Geochemistry Selected Aspects And Case Histories:

Sediments and Environmental Geochemistry Dietrich Heling, Peter Rothe, Ulrich Förstner, Peter Stoffers, 2012-12-06

Sediments and Environmental Geochemistry is dedicated to Professor German Müller on the occasion of his 60th birthday. The individual articles written by outstanding scientists cover a wide range of subjects indicating the broad spectrum of his interests. The main topics are Carbonate and Evaporite Petrology, Petroleum Formation and Exploration, Environmental Geochemistry, Coal Petrography, Data Bases in Geosciences and Volcanology. **Methods and Approaches in**

Metropolitan Pollution Research Hui Zhang, 2025-01-16. This book focuses on the behaviour and impact of environmental pollutants in metropolitan development by studying the cases of the soil, water and atmosphere of both Shanghai and Nanjing, which are two of the fastest economically developing areas in recent decades in China. Based on samples and experiments, some solutions for bottleneck problems in recent practices for urban environment research are systematically discussed, proposing the following innovations: 1. classifying urban pollution in a developing metropolis based on pollutant behaviour mechanisms; 2. identifying the amount of trace metals added by human activities to urban soil and their geological background amount distinguishable from the total amount of detectable trace metals as a whole. This book can provide a valuable guide for researchers and engineers in relevant disciplines and for environmental policymakers to consult in decision making practices for urban development and environmental protection. Origin and Mineralogy of Clays Bruce

Velde, 2013-03-09. Origin and Mineralogy of Clays the first of two volumes lays the groundwork for a thorough study of clays in the environment. The second volume will deal with environmental interaction. Going from soils to sediments to diagenesis and hydrothermal alteration, the book covers the whole spectrum of clays. The chapters on surface environments are of great relevance in regard to environmental problems in soils, rivers and lake/ocean situations, showing the greatest interaction between living species and the chemicals in their habitat. The book is of interest to scientists and students working on environmental issues. **Palaeoecology of Quaternary Drylands** Werner Smykatz-Kloss, 2004-02-20. The twelve

contributions in this volume represent the results of a ten-year interdisciplinary workshop on desert margins concerned with the geomorphological, geochemical, mineralogical, sedimentological, soil scientific characterisation of semi-deserts in Spain, Africa, Arabia and China. Desert sediments and soils, as well as processes and characteristics of their formation, are regarded from different geoscientific perspectives. The subjects of research include the development of desert soils and landscapes, the formation of alluvial loess, swamp ores, fulgurites and flood-out sediments, and focus on the reconstruction of palaeoecological events and changes. A critical study of dating methods rounds off the book. *Petroleum Abstracts. Literature and Patents*
