

Introduction to Economic Growth

Development of Modern Growth Theory

Questions -

1. Why are some people (countries) rich and some poor?
Need to find determinants of GDP and growth rates to answer this
2. Why do some countries grow faster than others?
3. In long-run, is growth rate exogenous or endogenous?

Endogenous Variable - Determined by decisions (usually based on optimizing behavior; e.g., maximize utility leads to demand; maximize profit leads to supply); (2) something you can change through policy (e.g., tax will change P_D , P_S , and Q)

Supply & Demand - $P_D = a - bQ$ and $P_S = c + dQ$; this leads to $P_D = P_S = a - bQ = c + dQ$
 $\Rightarrow Q = (a - c)/(d + b)$ $\therefore Q$ is given (endogenous)

Growth Rate - can policies affect growth rate (i.e., is growth rate endogenous)?
neoclassical theory says yes, but only in transition, not in long-run; some newer theories say yes; others say no

Technology - technical description; production function; intuitive: instructions for how to produce things

Rice Example - cooking rice requires a pot and heat source (capital), rice and water (resources), and a recipe with directions on how to cook it (technology)

Steady State Equilibrium - also called long-run equilibrium; all variables grow at a constant rates (could be different from each other, but constant over [or independent of] time)

Brief History -

Adam Smith - focused on accumulation of capital

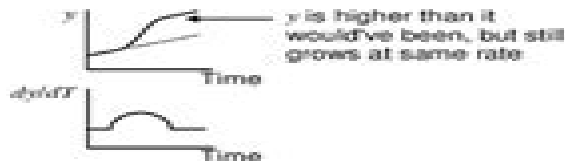

Carl Marx - focused on technological change and unemployment

Ricardo - focused on class structure

Neoclassical Growth Theory - Solow (1956); assumptions:

- Perfect competition in all markets
- Exogenous rate of population growth (in long-run)
- Exogenous rate of technological change (in long-run)
- Endogenous income per capita levels
- Endogenous transitional growth rates

Example - look at income per capita (y); we can change the growth rate (dy/dt) in transition, but not in the long-run (i.e., slope stays the same)

New Growth Theory - Romer (1986) & Lucas (1988); also called **endogenous growth** theory because now long-run growth rate can change; dropped perfect competition assumption and made technical change endogenous

Schumpeterian Approach to Economic Growth - new products have short lifetimes (all companies from the original Dow Industrial list are gone except General Electric); firms enjoy temporary monopoly power (imperfect competition) then are replaced (creative destruction); all used fixed population (not realistic) because introducing any population growth means economic growth unlimited (also not realistic)

Grossman & Helpman (1991), Aghion & Howitt (1992), Segerstrom, et. al. (1990) - focused on product quality

Romer (1990) - focused on product variety

Short Introduction To Modern Growth Theory:

A Short Introduction to Modern Growth Theory Ching-Yao Hsieh,Ahmad A. Abushaikha,Anne Richards,1978 No descriptive material is available for this title A Search for Synthesis in Economic Theory Ching-Yao Hsieh,S.L. Magnum,Stephen L. Mangum,2019-09-25 First published in 1986 Since the late 1960s the seeming inability of traditional monetary and fiscal policies to combat stagflation and address other macroeconomic issues has accelerated the erosion of confidence in the prevailing economic paradigm the neoclassical synthesis Dissensions among the members of the economics profession on both sides of the Atlantic have grown in number By the 1970s a majority of economists had recognized a crisis in economic theory Parallel to this development a crisis has also emerged in the Marxian camp This volume is a discussion from the various schools of thought around three of the salient common grounds follows the theory of a monetary economy the disequilibrium foundations of a general equilibrium theory and a rekindled interest in institutional factors **Economic Growth in the Regions of Europe** Sascha Sardadvar,2011-01-12 Although interest in spatial growth regressions has been growing in recent years formal theoretical approaches that acknowledge the role of space in economic growth have been sparse In particular in a regional context the assumption of independent non interacting closed economies can lead to misinterpretations This book fills the void by discussing neoclassical growth theory in a spatial context in order to examine growth both theoretically and empirically in a system of N regional economies A formal model is presented that allows for interregional fixed capital relocations which are in turn determined by the economies relative locations in space It is shown how initial endowments with human capital play a decisive role regarding the evolution of output and how both convergence and divergence processes may occur Using a spatial econometric model specification the theoretical model is tested empirically for 255 European regions *Books in Print* ,1982 **Subject Guide to Books in Print** ,1984 British Books in Print ,1985 **Southern Economic Journal** ,1991 **The Publishers' Trade List Annual** ,1986 **Paperbound Books in Print** ,1984 **An Introduction to the Theory of Dynamic Economics** A. Lloyd Wright,1984 The author has constructed a model of considerable originality for analysing economic change which emphasises the presence of distributed lags in its main behavioural equations The resultant shortfall in savings is made up by the injection of extra money supply **The Politics of Economic Growth in the Third World** Jonathan Tabor Krieckhaus,2000 **Book Review Digest** ,1926 **The United States Catalog** ,1925 *Journal of Economic Theory* Karl Shell,Jess Benhabib,2003 *Whitaker's Cumulative Book List* ,1983 The Bearing of the Evolutionary Theory on the Conception of God - Ukichi Kawaguchi,1916 **Growth Theory** Dipankar Dasgupta,Robert M. Solow,2005 This presentation of some recent advances in growth theory is motivated by two considerations First the works addressed by the book have not received uniform treatment in standard references It presents a self contained development of the subject matter including an exposition of the basic mathematics needed to study the subject At the same time the different concepts are presented with reference to a common platform

Since economics students are exposed to the tools of supply and demand starting from the most elementary of courses it is expected that they will readily grasp the message of modern growth theory when presented in this familiar language A second consideration is the emphasis the book accords to the role played by externalities as in the case of most public goods where technological changes generate non internalisable externalities which constitute one of the primary reasons for the failure of the competitive market system The failures lead to a natural quest for policies to sustain efficient solutions with minimal interventions by the government

Theory of Growth and the Tradition of Ricardian Dynamics Badal Mukherji,1982

Institutional Efficiency and Its Determinants Silvio Borner, Frank Bodmer, Markus Kobler,2004 This publication discusses the impact of institutions on economic development and the determinants that shape institutional quality using a new institutional economics NIE model based on a multidisciplinary approach to understanding issues including growth efficiency and income distribution Using the experience of Argentina under the Menem government as a case study a methodology is developed and applied to test theoretical hypotheses regarding the concept of institutional quality and how delineation between economic and political institutions work in practice It also considers systems of democracy and autocracy and the impact of traditional legal and cultural frameworks on institutional efficiency
