Evolutionary Patterns and Processes D. R. Lees, Dianne Edwards, 1993 Evolution is the central theme of all biology Research in the many branches of evolutionary study continues to flourish This book based on a symposium of the Linnean Society discusses the diversity in current evolutionary research It approaches the subject ambitiously and from several angles bringing together eminent authors from a variety of disciplines paleontologists traditionally with a macroevolutionary bias neontologists concentrating on microevolutionary processes and those studying the very essence of evolution the process of speciation in living organisms *Evolutionary Patterns and Processes* will appeal to a broad spectrum of professional biologists working in such fields as paleontology population biology and evolutionary genetics Biologists will enjoy chapters by Stephen J Gould discovering in the much earlier work of Hugo de Vries parallels with his ideas on punctuational evolution Guy Bush considering why there are so many small animals Peter Sheldon examining detailed fossil trilobite sequences for evidence of microevolutionary processes and considering models of speciation as well as others dealing with cytological ecological and behavioral processes leading to the evolution of new species None *Macroevolution in Human Prehistory* Anna Prentiss, Ian Kuijt, James C. Chatters, 2009-09-18 Cultural evolution much like general evolution works from the assumption that cultures are descendent from much earlier ancestors Human culture manifests itself in forms ranging from the small bands of hunters through intermediate scale complex hunter gatherers and farmers to the high density urban settlements and complex polities that characterize much of today's world The chapters in the volume examine the dynamic interaction between the micro and macro scales of cultural evolution

developing a theoretical approach to the archaeological record that has been termed evolutionary processual archaeology. The contributions in this volume integrate positive elements of both evolutionary and processualist schools of thought. The approach as explicated by the contributors in this work offers novel insights into topics that include the emergence, stasis, collapse, and extinction of cultural patterns and development of social inequalities. Consequently, these contributions form a stepping off point for a significant new range of cultural evolutionary studies.

Skeletal Biomineralization: Patterns, Processes and Evolutionary Trends J.G. Carter, 1990-12-31. This reference work offers a complete review and synthesis of existing data as well as recently published research on the patterns, processes, and evolutionary trends of biomineralization throughout the animal kingdom.

Handbook of Evolutionary Research in Archaeology Anna Marie Prentiss, 2019-06-03. Evolutionary Research in Archaeology seeks to provide a comprehensive overview of contemporary evolutionary research in archaeology. The book will provide a single source for introduction and overview of basic and advanced evolutionary concepts and research programs in archaeology. Content will be organized around four areas of critical research including microevolutionary and macroevolutionary process, human ecology, studies in evolutionary ecology, demography, and niche construction and evolutionary cognitive archaeology. Authors of individual chapters will address theoretical foundations, history of research, contemporary contributions and debates, and implications for the future for their respective topics. As appropriate, authors present or discuss short empirical case studies to illustrate key arguments.

Phylogenetic Patterns and the Evolutionary Process Niles Eldredge, Joel Cracraft, 1980.

Interpreting the Hierarchy of Nature Lance Grande, Olivier Rieppel, 1994-05-13. This book explores ways in which systematic patterns are used to infer evolutionary processes. Among evolutionary biologists and systematists, there is a constant interchange between those that study the process of evolution (e.g., mutation, selection, speciation) and those that study its patterns (e.g., variation, geographic distribution, ontogeny, phylogeny). Because patterns influence the development of theories and processes, and processes yield patterns, it is not always easy to distinguish one from another. This book is dialectic and helps crystallize a continuing debate over the relationship of patterns to process theories. Contributions by leading systematists, evolutionary biologists, and philosophers illustrate the debate over how and if evolutionary processes can be inferred from systematic patterns. Illustrates a continuing interplay between systematics and evolutionary theory.

Evolutionary Processes and Theory Samuel Karlin, Eviatar Nevo, 1986.

Primate Life History and Evolution C. Jean De Rousseau, 1990-08-20. These proceedings of a symposium held in Maja Mexico in October 1987 offer multidisciplinary investigations of ontogeny's role in primate evolution and the place of life history in evolutionary studies. This work presents a comprehensive view of life history's value in facilitating primate evolution research by giving equal emphasis to the two components of life history: the processes in individual organisms and the structural consequences of those processes in higher levels of organization.
