Report of Proceedings at a Conference Held ... 3rd May, 1916, Etc** NEGLECT.,1916 *The Neglect of Experiment* Allan Franklin,1989-09-29 What role have experiments played and should they play in physics How does one come to believe rationally in experimental results The Neglect of Experiment attempts to provide answers to both of these questions Professor Franklin s approach combines the detailed study of four episodes in the history of twentieth century physics with an examination of some of the philosophical issues involved The episodes are the discovery of parity nonconservation or the violation of mirror symmetry in the 1950s the nondiscovery of parity nonconservation in the 1930s when the results of experiments indicated at least in retrospect the symmetry violation but the significance of those results was not realized the discovery and acceptance of CP combined parity charge conjugations paricle antiparticle symmetry and Millikan s oil drop experiment Franklin examines the various roles that experiment plays including its role in deciding between competing theories confirming theories and calling fo new theories The author argues that one can provide a philosophical justification for these roles He contends that if experiment plays such important roles then one must have good reason to believe in experimental results He then deals with

deveral problems concerning such results including the epistemology of experiment how one comes to believe rationally in experimental results the question of the influence of theoretical presuppositions on results and the problem of scientific fraud This original and important contribution to the study of the philosophy of experimental science is an outgrowth of many years of research Franklin brings to this work more than a decade of experience as an experimental high energy physicist along with his significant contributions to the history and philosophy of science

England's Neglect of Science (Classic Reprint) John Perry, 2015-07-13 Excerpt from England's Neglect of Science As from the leading article in The Times of November 9th and from the articles and letters now appearing in the daily and weekly papers in which my address as President of the Institution of Electrical Engineers is being criticised it appears that I am regarded as now putting forward views that are quite new I think it well to publish some statements which I have made in the past It will be seen that these amplify certain parts of the address which have not been perfectly well understood It will be seen that there has been no essential change in my notions as to what kind of reform is needed in what is called our System of Education I have recently come to know that these notions are in perfect agreement with what Mr Herbert Spencer and many other educationalists have published They are certainly the notions of my old colleagues Professors Ayrton and Armstrong I cannot lay my hands on certain statements which I published in Japan between the years 1875 and 1879 but these as well as many other of my utterances since are in perfect agreement with my notions now I claim that these notions are natural to any man of experience who can think for himself and who is not materially interested in the maintenance of existing methods of education About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections
