The Reproductive Physiology of Mammals Keith K. Schillo, 2009 Reproductive Physiology of Mammals From Farm to Field and Beyond explores the fundamental principles of mammalian reproductive biology in the context of a society that values the management of the reproductive activity of human and nonhuman animals The format of the book is compatible with traditional approaches to teaching courses in reproductive physiology but emphasizes basic biological principles and comparative analyses of reproductive physiology This departure from tradition is intended to accommodate studentsa

growing interests in companion and wild animals and provide expertise that allows students to pursue careers that require literacy in basic science

Reproductive Physiology Made Easy MARK. AUSTIN, 2025-05-12 Most people remember the first time they felt completely lost in a science class the diagrams the hormone names the cycles that never seemed to end Reproductive physiology is one of those subjects that often feels more like decoding a foreign language than learning how the human body works But what if it didn't have to be that way This book was written for students who crave clarity not more confusion It takes the most important ideas in reproductive physiology and explains them in plain language with a tone that feels more like a trusted friend than a lecture Complex topics are broken down into manageable pieces and clever mnemonics help the facts stick without endless repetition Inside you'll find everything from how sperm and eggs are made to what really happens during the menstrual cycle pregnancy and menopause Each chapter is designed to build your confidence not just your knowledge Even if science was never your favorite subject *Reproductive Physiology Made Easy* will show you that understanding the human body isn't just possible it's actually fascinating You might even start to enjoy it Perfect for students in medicine nursing biology or anyone who wants to truly get it this book turns memorization into mastery

The Coming of Age of Insulin-Signalling in Insects Colin G.H. Steel, Xanthe Vafopoulou, 2015-01-28 The new millennium has seen a major paradigm shift in insect endocrinology Great advancements are being made which establish that nutrition and growth play a central role in diverse cellular and physiological phenomena during insect development and reproduction Nutrition affects rates of growth and is mainly regulated by the function of the pathway of insulin insulin like growth factor signalling This pathway is highly conserved across species and ultimately regulates rates of cell growth and proliferation in growing organs Insulin and insulin like peptides ILPs are some of the best studied hormones in the animal kingdom and all share a common structural motif and initiate a wide range of closely similar physiological processes in higher organisms In insects nutrition via circulating sugar promotes release of ILPs from brain neurosecretory cells into the haemolymph which act on peripheral tissues and stimulate protein synthesis and cell growth Therefore insect ILPs are common mediators between nutrition and growth in insects and are functionally analogous to mammalian insulin The 1980s and 1990s witnessed great progress in elucidation of the physiological and molecular mechanism of action of numerous insect hormones involved in regulation of growth development reproduction and metabolism But the signals for the initiation or termination of controlled events remained largely unknown ILPs were first identified from the silkworm *Bombyx mori* and were named bombyxins but related peptides were soon found in numerous species and their functions elucidated The insulin signalling pathway is now recognized as a central factor in the timing of cell proliferation growth longevity reproduction and reproductive diapause as well as social behaviour Recent work has revealed that the insulin signalling pathway is closely integrated with that of various other hormones including ecdysteroids the juvenile hormones and neuropeptides such as prothoracicotropic hormone In addition the pathway is also linked with both circadian daily and photoperiodic seasonal
