*Mobile Channel Characteristics [electronic Resource]* James K. Cavers,2003      **Mobile Satellite Communication Networks** Ray E. Sheriff,Y. Fun Hu,2003-05-09 Mobile satellite services are set to change with the imminent launch of satellite personal communication services S PCS through the use of non geostationary satellites This new generation of satellites will be placed in low earth orbit or medium earth orbit hence introducing new satellite design concepts One of the first texts to cover this rapidly evolving field this text provides the reader with an overview of mobile satellite systems from their initial introduction Inmarsat current satellite PCS referring to such systems as Globalstar through to Satellite UMTS and an understanding of the following The design concepts associated with non geostationary satellite systems constellation link budgets Doppler The concepts of UMTS network architecture aims in the context of IMT 2000 and the role foreseen for the satellite component complementary to terrestrial network network extension global availability Inter working between satellite and terrestrial networks network architecture ATM Adaptation Layer Radio interface technologies WB CDMA TDMA transmission environment Regulatory issues Future services and applications Potential satellite markets prediction techniques effect of tariffing policies on potential market With leading edge information this valuable resource will be indispensable to researchers engineers operators and market evaluators in satellite service industries and research institutions as well as postgraduates and research students in the field      *Optimization Methods in Mobile Communication Systems* Milind Pande,Anand J. Kulkarni,Apoorva S. Shastri,2025-10-22 This book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content This machine generated volume with chapter introductions by the human expert of summaries of the existing studies furthers our understanding of the optimization methods in mobile communication systems The book provides a machine generated comprehensive yet classified review of the optimization methods techniques and approaches associated with different mobile communications and systems including wavelet based CR OFDM systems MIMO slot antenna with low mutual coupling for 5G networks etc It also covers mainly the techniques for performance analysis of MIMO systems such as the hybrid filtering technique for MIMO OFDM systems and artificial intelligence solutions beyond 5G radio access networks Questions and related keywords were prepared for the machine to query discover collate and structure by Artificial Intelligence AI clustering The AI based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary Springer Nature has published much on these topics in its journals over the years so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful The automatically generated literature summaries in this book are intended as a springboard to further discoverability They are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new

to the topics Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples It is important to us as a publisher to make advances in technology easily accessible to our authors and find new ways of AI based author services that allow human machine interaction to generate readable usable collated research content

**Global Mobile Satellite Systems** Peter A. Swan, Carrie L. Devieux Jr., 2012-12-06 Global Mobile Satellite Systems A Systems Overview makes mobile satellite communications understandable for communication engineers candidates for an engineering degree technicians managers and other decision makers such as financiers and regulators It provides a systems oriented top level view of mobile satellite communications In particular it focuses on Global Mobile Satellite Systems GMSS including active programs such as Globalstar IRIDIUM ORBCOMM ACeS and Thuraya or so called the second generation mobile satellite systems class The authors start with a brief description of three generations of satellite systems in use or planned in the telecommunications industry Selected systems architectural trades are identified and explained to illustrate how various GMSS systems are formulated developed and evaluated It includes an examination of market demand trends business trades regulatory issues as well as technical considerations Major issues are examined in trade study style to provide easy access to key information Key systems drivers such as orbit trades between LEO s MEO s and GEO s frequency protocols customer bases and regulatory and engineering issues are included This book should appeal to individuals interested in the basic elements of Global Mobile Satellite Systems

*Mobile Satellite Communications* Shingo Ohmori, Hiromitsu Wakana, Seiichirō Kawase, 1998 Mobile Satellite Communications is the first book solely devoted to examining the advanced systems that allow callers to make successful satellite links from moving vehicles on the ground sea or in the air It examines the history of mobile satellite communications as well as their key technologies

[Applicability of Mobile Marketing in the Marketing Mix of Trade Fair Organizers](#) Immo Prenzel, 2010-04-25 Master s Thesis from the year 2009 in the subject Business economics Offline Marketing and Online Marketing grade 1 3 Cologne Business School K ln Fakult t f r Wirtschaftswissenschaften language English abstract Executive Summary Trade fair organizers face an intensified inter and intra industry competition and increasing customer requirements towards efficiency and convenience of the trade fair events In order to stay competitive trade fair companies have to integrate new market oriented marketing measures to improve their customer communication extend their service portfolio and thusly satisfy the customer needs In this context the applicability of mobile marketing in the marketing mix of trade fair organizers was researched in this thesis It was asserted that mobile marketing is a significant global trend with enormous growth potential as far more people can be reached via the

mobile channel than via any other marketing medium. Thereby mobile marketing is not limited to its communication function but it is understood more comprehensively as the activity set of institutions and processes for creating, communicating, delivering and exchanging offerings that have value for customers, clients, partners and the society at large. The mobile channel offers unique characteristics that distinguish it from other channels and allow a targeted customer communication. However, there are limitations to mobile marketing that were described within a general framework consisting of technological, legal, customer, organizational and economical aspects. Along this framework, the main strategic approaches, the push and pull approach, were identified. In the following, trade fairs and its function, its economy and participants were introduced. The focus was put on the trade fair organizer as well as on the two most important customer groups, the exhibitors and visitors. Since the applicability of mobile marketing depends on these groups, the structure, goals and needs were analyzed thoroughly. It was shown that the success of the event depends on the ability of the trade fair organizer to satisfy the needs of both customer groups simultaneously as they are mutually dependent. Thereby, it is important to acquire the right quantity and quality of exhibitors and visitors and provide them with sufficient information before the event as a basis for their participation decision. During the event, the trade fair organizer must provide a broad service portfolio to support both customer groups to reach their trade fair goals in an efficient manner. After the trade fair, tools for customer retention need to be employed to keep contact with the customers between the events.

Mobile Communications Hideichi Sasaoka, 2000. Developments in mobile communication have been remarkable as seen by the increasing use of mobile and Internet phones. The traditional analog technology used in these communications is also being replaced by digital technology. The textbook covers an extensive range of subjects on land mobile communications from the basics to key technologies including digital transmission technology and code division multiple access.

Handbook of Mobile Radio Networks Sami Tabbane, 2000. Here is a comprehensive system level treatment of the total realm of mobile radio communications, complete coverage of both the basic concepts and the systems themselves to help you improve performance, increase productivity and save time.

Mobile Communications Handbook Jerry D. Gibson, 1995-12-18. In a single volume, *The Mobile Communications Handbook* covers the entire field from principles of analog and digital communications to cordless telephones, wireless local area networks, LANs and international technology standards. The amazing scope of the Handbook ensures that it will be the primary reference for every aspect of mobile communications.

*Mobile Communication Systems* Krzysztof Wesolowski, 2002-02-15. Mobile communication systems have become one of the hottest areas in the field of telecommunications and it is predicted that within the next decade a considerable number of connections will become partially or completely wireless. Rapid development of the Internet with its new services and applications has created fresh

challenges for the further development of mobile communication systems This volume presents an easy to follow overview of such systems ranging from introductory material through to a thorough system description Provides the necessary background information on digital communication systems such as speech and channel coding digital modulations including OFDM and basic access protocols Presents the properties of a mobile radio channel and describes mobile radio propagation models Explains the concept of cellular systems and their design Covers GSM and IS 95 and reviews paging systems first generation cellular systems wireless telephony trunking systems and wireless local loops Features HSCSD GPRS EDGE UMTS and WLAN technologies Includes an introduction to smart antennas The extensive scope of Mobile Communication Systems ensures it will be a valuable reference for communication students and engineers wishing to learn about every aspect of this fascinating and fast evolving field

Mobile Fading Channels Matthias Pätzold,2002-04 Mobile channel fading is a loss in transmission intensity caused by changes in the transmission medium By dealing with the modelling analysis and simulation of mobile fading channels this text provides a fundamental understanding of many issues in the area of mobile fading channel modelling The main topics addressed in the volume are fundamentals of stochastic and deterministic channel models and modelling and simulation of frequency nonselective and frequency selective fading channels The guide also features methods for the design and realization of efficient channel simulators and fast channel simulators and MATLAB programs for the evaluation and simulation of mobile fading channels
