groundwater projects have included a 15-day chamber test (Phase I) in which plants provided microclimate for a single rat and a 30-day chamber test (Phase II) in which an integrated regenerative life support system was demonstrated with four humans in a closed chamber. The objective of the Life Support Systems Integration Facility, was also used during Phase III. This was a 90-day demonstration of life support technologies, the air revitalization system is a water recovery system, intended for use onboard the International Space Station (ISS). [10] In total, investigators and medical support personnel from the Medical Sciences Division, in the Exercise Physiology Laboratory (EPL), were invited to evaluate their planned protocols.

Systems Integration Facility
Integration Project Objectives
The test had two objectives:
1. Demonstration of life support methods planned for use on the ISS.
2. Evaluate production and oxygen utilization of environmental control systems.

The Trinity Aquifer is widespread and furnishes small to moderate amounts of groundwater to entities in 17 counties. In the eastern portions of the aquifer development has resulted in significant declines in the water table.

Geology

The surface of the watershed is comprised of geological formations of the Permian, Cretaceous, and Quaternary systems and are exposed at the surface (Phase I, 1970; Taylor, 1970).

The gently east-northeast dipping Permian rocks are exposed in various, successively younger belts from east to west across the watershed. Cretaceous sedimentary units, dip to the southwest forming northward facing steep-walled mesas in the watershed. Unconsolidated sands and gravels of the Quaternary System of terrace deposits along and between the tributaries of the watershed.

Introducing the Human Genome

The Race for Life

For all the dreams of the twentieth century, the most profound and revolutionary achievement of the century was the sequencing of the human genome. In 2003, scientists announced the completion of the Human Genome Project, a massive international effort to identify all the genes in humans and determine their locations on chromosomes. This project was the culmination of decades of research in genetics and molecular biology.

Some definitions
The human genome is the full complement of genes passed to a human cell. (Genes are sections of DNA that code for proteins, which are the building blocks of life. The proteins in turn determine the structure and function of cells and tissues.)
The Human Genome Project was an international effort to identify all the genes in humans and determine their locations on chromosomes. This project was the culmination of decades of research in genetics and molecular biology.
