Exercises for Section 1.1

1.1.1

What is the difference between a compiler and an interpreter?

Answer

A compiler is a program that can read a program in one language - the source language - and translate it into an equivalent program in another language - the target language and report any errors in the source program that it detects during the translation process.

Interpreter directly executes the operations specified in the source program on inputs supplied by the user.

1.1.2

What are the advantages of: (a) a compiler over an interpreter (b) an interpreter over a compiler?

Answer

a. The machine-language target program produced by a compiler is usually much faster than an interpreter at mapping inputs to outputs.

b. An interpreter can usually give better error diagnostics than a compiler, because it executes the source program statement by statement.

Pascal for Electronic Engineers j Attikiouizel, 2012-12-06 In the last few years there has been a tremendous increase in the number of Pascal courses taught at various levels in schools and universities Also with the advances made in electronics it is possible today for the majority of people to own or have access to a microcomputer which invariably runs BASIC and Pascal A number of Pascal implementations exist and in the last two years a new Pascal specification has emerged This specification has now been accepted as the British Standard BS6192 1982 This standard also forms the technical content of the proposed International Standard IS07185 In addition to a separate knowledge of electronic engineering and programming a marriage of engineering and computer science is required The present method of teaching Pascal in the first year of electronic engineering courses is wasteful Little if any benefit is derived from a course that only teaches Pascal and its use with abstract examples What is required is continued practice in the use of Pascal to solve meaningful problems in the student s chosen discipline The purpose of this book is to make the use of standard Pascal BS6192 as natural a tool in solving engineering problems as possible In order to achieve this aim only problems in or related to electrical and electronic engineering are considered in this book The many worked examples are of various degrees of difficulty ranging from a simple example to bias a transistor to programs that analyse passive RLC networks or synthesise active circuits
