problem the study of the absolute Galois group of a field the connection between ordering valuations and quadratic forms over a formally real field the application to real algebraic geometry the study of noncommutative rings etc The special feature of this book is its focus on current applications of valuation theory to this broad range of topics Also included is a paper on the history of valuation theory The book is suitable for graduate students and research mathematicians working in algebra algebraic geometry number theory and mathematical logic

Resolution of Curve and Surface Singularities in Characteristic Zero K. Kiyek, José Luis Vicente Córdoba, 2004-10 This book covers the beautiful theory of resolutions of surface singularities in characteristic zero The primary goal is to present in detail and for the first time in one volume two proofs for the existence of such resolutions One construction was introduced by H W E Jung and another is due to O Zariski Jung's approach uses quasi ordinary singularities and an explicit study of specific surfaces in affine three space In particular a new proof of the Jung Abhyankar theorem is given via ramification theory Zariski's method as presented involves repeated normalisation and blowing up points It also uses the uniformization of zero dimensional valuations of function fields in two variables for which a complete proof is given Despite the intention to serve graduate students and researchers of Commutative Algebra and Algebraic Geometry a basic knowledge on these topics is necessary only This is obtained by a thorough introduction of the needed algebraic tools in the two appendices

The Multiplicity Theory for Specialized Fields Jan Hendrik de Boer, 1958 Algebraic K-theory and Algebraic Number Theory Michael R. Stein, R. Keith Dennis, 1989 This volume contains the proceedings of a seminar on Algebraic K theory and Algebraic Number Theory held at the East West Center in Honolulu in January 1987 The seminar which hosted nearly 40 experts from the U S and Japan was motivated by the wide range of connections between the two topics as exemplified in the work of Merkurjev Suslin Beilinson Bloch Ramakrishnan Kato Saito Lichtenbaum Thomason and Ihara As is evident from the diversity of topics represented in these proceedings the seminar provided an opportunity for mathematicians from both areas to initiate further interactions between these two areas
